Calibration Standard QC Report

Data File: C:\ICPCHEM\1\DATA\04L2712b.B\009CALI.D\009CALI.D#
Date Acquired: Dec 27 2004 01:08 pm
Operator:
Sample Name: cs6,04ws2309
Misc Info:
Vial Number: 1107
Current Method: C:\ICPCHEM\1\METHODS\60200111.M
Calibration File: C:\ICPCHEM\1\CALIB\60200111.C
Last Cal Update: Dec 27 2004 01:04 pm
Sample Type: CalStd
Total Dil Factor: 1.00

FROM: Donna Breaux, DataVal, Inc. DB 1/29/05

QUALITY CONTROL SUMMARY REPORT FOR THE BAKER BEACH 3 AND 4 SITES, THE PRESIDIO OF SAN FRANCISCO, CA

LABORATORY: Curtis & Tompkins, Ltd., Berkeley, CA

SAMPLING DATES: June 30, July 21 and 30; August 2, 4 through 6, 8 and 30; September 14; October 1 and 7; November 5, 17, 22, and 23; and December 15 and 16, 2004

Data validation of Levels III and IV laboratory data packages was performed according to the project-specific guidelines. These guidelines were outlined in the Presidio-wide Quality Assurance Project Plan (QAPP), Sampling and Analysis Plan, April, 2001; the U. S. Environmental Protection Agency Contract Laboratory Program National Functional Guidelines for Organic Data Review, October, 1999; and the U. S. Environmental Protection Agency Contract Laboratory Program National Functional Guidelines for Inorganic Data Review, July 2002.

The data were reviewed for holding times, blanks, GC/MS tunes, initial calibrations, continuing calibration verification (CCV) standards, performance evaluation mix (PEM) standards, internal standards, laboratory control samples (LCS), surrogate recoveries, matrix spikes (MS), matrix spike duplicates (MSD), ICP interference check standards, ICP serial dilutions, compound identification and quantitation, and field duplicate samples.

The following paragraphs highlight the essential findings of the data validation effort:

I. <u>Volatile Organic Compounds by GC/MS (8260B)</u>

Overall, the data are usable as reported with any added qualifiers. Qualification was required for the reasons noted in Section F.

A. <u>Reporting Limits</u>

The laboratory reporting limits for VOCs in soil and water matrix samples met the project required reporting limits, with the following exceptions:

1. The laboratory reporting limits for acetone, methylene chloride and vinyl acetate in soil matrix samples did not meet the project required reporting limits listed in Table 2-6.8-1 of the QAPP. The laboratory reported 20 ug/kg for acetone and methylene chloride. The project required reporting limits were 10 ug/kg for acetone, and 5 ug/kg for methylene chloride. The laboratory reported 50 ug/kg for vinyl acetate, the project required reporting limit was 10 ug/kg.

2. The laboratory reporting limits did not meet the project required reporting limits listed in Table 2-6.8-1 of the QAPP for bromoform, bromomethane, chloroethane and chloromethane in water matrix samples. The laboratory reported 1.0 ug/L for these compounds. The project required reporting limit was 0.5 ug/L. The laboratory reporting limit of 10 ug/L for methylene chloride did not meet the project required reporting limit of 4.5 ug/L.
3. It should be noted that the reporting limits for all soils were raised due to dry weight correction.

B. Holding Times
Technical holding time criteria were met for all project samples.

C. Blanks
Target analytes were not observed in any laboratory method blanks associated with the project samples. Target analytes were not observed in any trip blanks associated with the project samples.

D. GC/MS Tunes
All QC criteria were met for the GC/MS tunes associated with the project samples.

E. Initial Calibration
Initial calibration criteria were met for all calibration standards associated with the project samples.

F. Continuing Calibration
Continuing calibration criteria were met for all continuing calibration standards associated with the project samples, with the following exceptions:

1. The 8/19/04 at 10:11 water matrix continuing calibration verification (CCV) standard analyzed on instrument MSVOA10, had two compounds with percent differences (%D) less than -25%: Freon 12 (-31%) and bromomethane (-60%). The associated samples were non-detect for Freon 12 and bromomethane, and were qualified as estimated (UJ).
2. The 8/18/04 at 11:16 soil matrix CCV standard analyzed on instrument MSVOA06, had one compound with a %D less than -25%: Freon 12 (-27%). The associated samples were non-detect for Freon 12, and were qualified as estimated (UJ).
3. The 11/09/04 at 16:14 water matrix CCV standard analyzed on instrument MSVOA08 had one compound with a %D less than -25%: bromoform (-28%). The associated sample was non-detect for bromoform, and was qualified as estimated (UJ).
4. Sample qualification was not required when continuing calibration standards failed high and were associated with samples with non-detect results. These failures were not noted in this report.

See Table 2 of this report for a summary of qualifications due to continuing calibration percent difference failure.

G. Matrix Spike/Matrix Spike Duplicate
All QC criteria were met for the matrix spikes and matrix spike duplicates associated with the project samples, with the following exceptions:
1. The percent recoveries for 1,1-dichloroethene were outside the 65%-135% project acceptance criteria in QC samples BB3EX149[0.5] (176210-007) MS/MSD at 141% and 140%. The parent sample was non-detect for 1,1-dichloroethene and qualification was not required. (QC Batch 96818)

H. Laboratory Control Samples
All QC criteria were met for the laboratory control samples associated with the project samples.

I. Surrogate Recoveries
Surrogate spike recoveries met QC acceptance criteria for all project samples. Samples with non-detected results and high failing surrogate recoveries did not require qualification, and are not noted in this report.

J. Internal Standards
Internal standard areas and retention times met QC acceptance criteria for all project samples.

K. Compound Identification and Quantitation
The samples highlighted in **bold** typeface in Table 1 received full, level IV data validation. This included re-calculation of GC/MS tunes, initial and continuing calibrations, surrogate values, and internal standard areas; in addition to re-calculation of all reported results for VOCs in these samples. If the project sample results were non-detected, the results for the QC samples were re-calculated and verified as correctly reported by the laboratory. For the samples that received full data validation, no problems were observed with compound identification and quantitation.

II. Semi- Volatile Organic Compounds by GC/MS (8270C)

Overall, the data are usable as reported with any added qualifiers. Qualifications were required for the reasons noted in Sections F and G.

A. Reporting Limits
The laboratory reporting limits for SVOCs in soil matrix samples met the project required reporting limits, with the following exceptions:
1. The laboratory reporting limits for 2-nitrophenol and acenaphthene in soil matrix samples did not meet the project required reporting limits listed in Table 2-6.9-1 of the QAPP. The laboratory reported 670 ug/kg for 2-nitrophenol and acenaphthene. The project required reporting limit was 330 ug/kg for these two compounds.

2. It should be noted that the reporting limits for all soils were raised due to dry weight correction.

B. Holding Times
Technical holding time criteria were met for all project samples.

C. Blanks
Target analytes were not observed in any laboratory method blanks associated with the project samples.

D. GC/MS Tunes
All QC criteria were met for the GC/MS tunes associated with the project samples.

E. Initial Calibration
Initial calibration criteria were met for all calibration standards associated with the project samples.

F. Continuing Calibration
Continuing calibration criteria were met for all continuing calibration standards associated with the project samples, with the following exceptions:

1. The 8/10/04 at 22:32 soil matrix continuing calibration verification (CCV) standard analyzed on instrument MSBNA03 had one compound with a percent difference (%D) less than -25%: benzoic acid (-28%). The non-detected results for benzoic acid in the associated samples were qualified as estimated (UJ).
2. The 11/09/04 at 10:11 soil matrix CCV analyzed on instrument MSBNA05 had one compound with a %D less than -25%: 2,4-dinitrophenol (-30%). The associated sample was non-detect for 2,4-dinitrophenol, and was qualified as estimated (UJ).
3. Qualification was not required for samples with non-detect results that were associated with continuing calibration standards that failed high. Those failures were not noted in this report.

See Table 2 of this report for a summary of qualifications due to continuing calibration percent difference failure.

G. Matrix Spike/Matrix Spike Duplicate
All QC criteria were met for the matrix spikes and matrix spike duplicates associated with the project samples, with the following exceptions:

1. The percent recoveries for pyrene were outside the 35%-142% project acceptance criteria in QC samples BB3EX116[0.5] MS/MSD at 28% and 9%, respectively. The detected result for pyrene in the parent sample was qualified as estimated with a low bias (J-) for percent recovery failure. (QC Batch 93906)

2. The percent recoveries for 2,4-dinitrotoluene, 2-chlorophenol and 4-chloro-3-methylphenol were outside the project acceptance criteria in QC sample 176211-001 MS. The parent sample was associated with a site unrelated to the project site, and qualification was not required. (QC Batch 96880)
3. The percent recovery for 2,4-dinitrotoluene was outside the project acceptance criteria in QC sample BB3EX153[0.5] MS at 92%. The result for 2,4-dinitrotoluene in the parent sample was non-detect and qualification was not required. (QC Batch 96932)

See Table 2 of this report for a summary of qualifications due to matrix spike percent recovery failures.

H. Laboratory Control Samples
All QC criteria were met for the laboratory control samples associated with the project samples.

I. Surrogate Recoveries
Surrogate spike recoveries met QC acceptance criteria for all project samples. Samples with non-detected results and high failing surrogate recoveries did not require qualification, and are not noted in this report.

J. Internal Standards
Internal standard areas and retention times met QC acceptance criteria for all project samples.

K. Compound Identification and Quantitation
The samples highlighted in **bold** typeface in Table 1 received full, level IV data validation. This included re-calculation of GC/MS tunes, initial and continuing calibrations, surrogate values, and internal standard areas; in addition to re-calculation of all reported results for SVOCs in these samples. If the project sample results were non-detected, the results for the QC samples were re-calculated and verified as correctly reported by the laboratory. For the samples that received full data validation, no problems were observed with compound identification and quantitation.

III. Total Petroleum Hydrocarbons - Gasoline Range (8015B)

Overall, the data are usable as reported. Qualification was not required.

A. Reporting Limits
The laboratory reporting limit for gasoline range organics in soil matrix samples met the project required reporting limit.

B. Holding Times
Technical holding time criteria were met for all project samples.

C. Blanks
Target analytes were not observed in any laboratory method blanks associated with the project samples.

D. Initial Calibration
Initial calibration criteria were met for all calibration standards associated with the project samples.

E. Continuing Calibration
Continuing calibration criteria were met for all continuing calibration standards associated with the project samples.

F. Matrix Spike/Matrix Spike Duplicate
All QC criteria were met for the matrix spikes and matrix spike duplicates associated with the project samples.

G. Laboratory Control Samples
All QC criteria were met for the laboratory control samples associated with the project samples.

H. Surrogate Recoveries
Surrogate spike recoveries met QC acceptance criteria for all project samples.

IV. Total Petroleum Hydrocarbons – Diesel/Motor Oil Range (8015B)

Overall, the data are usable as reported. Qualification was not required.

A. Reporting Limits
The laboratory reporting limits for diesel and fuel oil range organics in soil matrix met the project required reporting limits. It should be noted that the reporting limits for all soils were raised due to dry weight correction.

B. Holding Times
Technical holding time criteria were met for all project samples.

C. Blanks
Target analytes were not observed in any laboratory method blanks associated with the project samples.

D. Initial Calibration
Initial calibration criteria were met for all calibration standards associated with the project samples.

E. Continuing Calibration
Continuing calibration criteria were met for all continuing calibration standards associated with the project samples. Qualification was not required for samples with non-detect results that were associated with continuing calibration standards that failed high. Those failures are not noted in this report.

F. Matrix Spike/Matrix Spike Duplicate
All QC criteria were met for the matrix spikes and matrix spike duplicates associated with the project samples, with the following exceptions:

1. The percent recoveries for diesel were outside the 65%-135% project acceptance criteria in QC samples 173881-004 MS/MSD at 29% and 49%, respectively. The parent sample was associated with a site unrelated to the project site, and qualification of the project samples was not required. (QC Batch 93629)
2. The percent recovery for diesel was outside the 65%-135% project acceptance criteria in QC sample 176242-004 MSD. The parent sample was associated with a site unrelated to the project site, and qualification was not required. (QC Batch 97026)

G. Laboratory Control Samples
All QC criteria were met for the laboratory control samples associated with the project samples.

H. Surrogate Recoveries
Surrogate spike recoveries met QC acceptance criteria for all project samples. Samples with non-detected results and high failing surrogate recoveries did not require qualification, and are not noted in this report.

I. Compound Identification and Quantitation
The samples highlighted in **bold** typeface in Table 1 received full, level IV data validation. This included re-calculation of initial and continuing calibrations, and surrogate values; in addition to re-calculation of all reported results for TPH-diesel and motor oil in these samples. If the project sample results were non-detected, the results for the QC samples were re-calculated and verified as correctly reported by the laboratory. For the samples that received full data validation, no problems were observed with compound identification and quantitation.

Sample BB3EX139[0.5] (175838-001) did not receive silica gel clean-up procedure. Since the sample was non-detect for TPH-diesel and motor oil, the anomaly would not affect the usability of the data. All other samples were silica gel cleaned.

V. Organochlorine Pesticides (8081A)

Overall, the data are usable as reported with any added qualifiers. Qualifications were required for the reasons noted in Sections D, E and I.

A. Reporting Limits

All laboratory reporting limits for pesticides in soil matrix samples met the project required reporting limits, with the following exceptions:

1. It should be noted that the reporting limits for all soils were raised due to dry weight correction.
2. Results for all compounds in sample BB3EX100[0.5] (173741-001) were reported as non-detected at a five-fold dilution due to the nature of the sample matrix.
3. Results for all compounds in sample BB3SS100[1] (173178-001) were reported as non-detected at a five-fold dilution due to the nature of the sample matrix.
4. Results for all compounds in sample BB3SS102[1.5] (173178-005) were reported as non-detected at a two-fold dilution due to the nature of the sample matrix.
5. Results for all compounds in sample BB3EX116[0.5] (174074-001) were reported as non-detected at a two-fold dilution due to the nature of the sample matrix.
6. Results for all compounds in sample BB4EX104[0.5] (175141-005) were reported as non-detected at a twenty-fold dilution due to the nature of the sample matrix.
7. Results for all compounds for sample DUP110504A (175836-004) were reported as non-detected at a two-fold dilution due to the nature of the sample matrix.

In all cases listed above, the reporting limits were raised by the dilution factors.

B. Holding Times

Technical holding time criteria were met for all project samples.

C. Blanks

Target analytes were not observed in any laboratory method blanks associated with the project samples.

D. Initial Calibration

Initial calibration criteria were met for all calibration standards associated with the project samples, with the following exceptions:

1. When data from two columns was presented and one had acceptable percent relative standard deviations (%RSD) and the other did not, unless clearly stated, it was assumed that the laboratory used the column in control for reporting of sample results.
2. The 8/18/04 soil matrix initial calibration analyzed on instrument GC16 had three compounds with %RSDs greater than 20% on the reported column: beta-BHC (22%), delta-BHC (22%) and endosulfan sulfate

(25%). The non-detected results for beta-BHC, delta-BHC and endosulfan sulfate in the associated sample were qualified as estimated (UJ).

3. The 8/20/04 soil matrix initial calibration analyzed on instrument GC23 had one compound with a %RSD greater than 20% on both columns: endosulfan sulfate (23% and 23%) and one compound with a %RSD greater than 20% on the reported column: endrin ketone (22%). The non-detected results for endosulfan sulfate and endrin ketone in the associated samples were qualified as estimated (UJ).

See Table 2 of this report for a summary of qualifications due to initial calibration percent relative standard deviation failure.

E. Continuing Calibration

Continuing calibration criteria were met for all continuing calibration standards associated with the project samples, with the following exceptions:

1. Sample qualification was not required when continuing calibration standards failed high and were associated with samples with non-detect results. These failures were not noted in this report.
2. When data from two columns was presented and one had acceptable percent differences and the other did not, unless clearly noted, it was assumed that the laboratory used the column in control for reporting of sample results.
3. The 8/5/04 at 03:04 soil CCV analyzed on instrument GC16 had two compounds with %Ds less than -15% on both columns: delta-BHC (-18% and -16%) and 4,4'-DDT (-25% and -27%). The non-detected results for delta-BHC and 4,4'-DDT in the associated samples were qualified as estimated (UJ).
4. The 8/9/04 at 13:22 soil matrix CCV analyzed on instrument GC23 had one compound with %Ds less than -15% on both columns: endrin (-34% and -18%). The non-detected results for endrin in the associated samples were qualified as estimated (UJ).
5. The 8/20/04 at 00:50 soil matrix CCV analyzed on instrument GC16 had two compounds with %D less than -15% on both columns: 4,4'-DDT (-27% and -20%) and methoxychlor (-23% and -18%). The non-detected results for 4,4'-DDT and methoxychlor in the associated samples were qualified as estimated (UJ).
6. The 8/31/04 at 21:16 soil matrix CCV analyzed on instrument GC23 had one compound with a %D less than -15% on the reported column: 4,4'-DDT (-20%). The detected results for 4,4'-DDT in the associated samples were qualified as estimated with a low bias (J-).
7. The 10/6/04 at 19:31 soil matrix CCV analyzed on instrument GC23 had one compound with a %D less than -15% on the reported column: endrin ketone (-17%). The non-detected results for endrin ketone in the associated samples were qualified as estimated (UJ).
8. The 10/11/04 at 12:04 soil matrix CCV analyzed on instrument GC23 had two compounds with %D less than -15% on the reported column:

4,4'-DDT (-16%) and endrin ketone (-16%). The non-detected results for 4,4'-DDT and endrin ketone in the associated samples were qualified as estimated (UJ).

9. The 11/10/04 at 00:35 soil matrix CCV analyzed on instrument GC23 had one compound with a %D less than -15% on both columns: 4,4'-DDT (-23% and -18%). The non-detected result for 4,4'-DDT in the associated sample was qualified as estimated (UJ).

See Table 2 of this report for a summary of qualifications due to continuing calibration percent difference failure.

F. Performance Evaluation Mix (PEM) Check Standards

All PEM check standards met the project degradation criteria of 20% for endrin and 4,4'-DDT. PEM standards that failed and were associated with samples with non-detected results for the failing compounds, did not require qualification and are not noted in this report.

G. Matrix Spike/Matrix Spike Duplicate

All QC criteria were met for the matrix spikes and matrix spike duplicates associated with the project samples, with the following exceptions:

1. The percent recoveries for all spiked compounds failed the 65%-135% acceptance criteria in QC samples 173158-002 MS/MSD. The parent sample was associated with a site unrelated to the project site, and qualification of the project samples was not required. (QC batch 92485)
2. The percent recovery for five of the six pesticide spike compounds failed the 65%-135% acceptance criteria in QC samples 173711-001 MS and/or MSD. The parent sample was associated with a site unrelated to the project site, and qualification of the project samples was not required. (QC batch 93347)
3. The percent recovery for 4,4'-DDT failed the 65%-135% acceptance criteria in QC samples 174988-006 MS/MSD. The parent sample was associated with a site unrelated to the project site, and qualification of the project samples was not required. (QC batch 95271)

H. Laboratory Control Samples

All QC criteria were met for the laboratory control samples associated with the project samples.

I. Surrogate Recoveries

Surrogate spike recoveries met QC acceptance criteria for all project samples, with the following exceptions:

1. Samples with non-detected results and high failing surrogate recoveries did not require qualification, and are not noted in this report.
2. Samples with dilutions of five-fold or greater and failing surrogate recoveries did not require qualification, and are not noted in this report.

3. The percent recoveries for surrogate 2,4,5,6-tetrachloro-meta-xylene (TCMX) failed the 65%-135% project acceptance criteria in several project samples. The compounds associated with surrogate TCMX: alpha-BHC, beta-BHC, delta-BHC, gamma-BHC, aldrin, heptachlor, heptachlor epoxide and endosulfan I, were non-detect and qualified as estimated (UJ). The following table lists the project samples and the failing surrogate recoveries.

Project Sample Name	Laboratory Sample ID	TCMX % Recovery
BB3EX124[0.5]	174631-002	62
BB3EX137[0.5]	175836-001	38
BB3EX138[0.5]	175836-002	64
BB3EX141[5.5]	175836-007	55
BB3EX146[1.0]	176210-004	63

See Table 2 of this report for a summary of qualifications due to surrogate percent recovery failures.

J. Compound Identification and Quantitation
The samples highlighted in **bold** typeface in Table 1 received full, level IV data validation. This included re-calculation of initial and continuing calibrations, and surrogate values; in addition to re-calculation of all reported results for pesticides in these samples. If the project sample results were non-detected, the results for the QC samples were re-calculated and verified as correctly reported by the laboratory. For the samples that received full data validation, no problems were observed with compound identification and quantitation.

VI. Polychlorinated Biphenyls (8082)

Overall, the data are usable as reported with any added qualifiers. Qualifications were required for the reasons noted in Sections F and H.

A. Reporting Limits
All laboratory reporting limits for PCBs in soil matrix met the project required reporting limits. It should be noted that the reporting limits for all soils were raised due to dry weight correction.

B. Holding Times
Technical holding time criteria were met for all project samples.

C. Blanks
Target analytes were not observed in any laboratory method blanks associated with the project samples.

D. Initial Calibration
Initial calibration criteria were met for all calibration standards associated with the project samples.

E. Continuing Calibration

Continuing calibration criteria were met for all continuing calibration standards associated with the project samples, with the following exceptions:

1. Sample qualification was not required when continuing calibration standards failed high and were associated with samples with non-detect results. These failures were not noted in this report.
2. When data from two columns was presented and one had acceptable percent differences and the other did not, unless clearly stated, it was assumed that the laboratory used the column in control for reporting of sample results.

F. Matrix Spike/Matrix Spike Duplicate

All QC criteria were met for the matrix spikes and matrix spike duplicates associated with the project samples, with the following exceptions:

1. Samples with non-detected results and high failing matrix spike recoveries did not require qualification, and are not noted in this report.
2. The percent recoveries for PCB-1016 and PCB-1260 were outside the 65%-135% project acceptance criteria in QC samples BB3EX118[0.5] MS/MSD at 46% and 54%, respectively. The relative percent difference (RPD) between the MS and MSD also failed the 35% project acceptance criteria for PCB-1016 at 39%. The non-detected result for PCB-1016 in the parent sample was qualified as estimated (UJ) for percent recovery and RPD failure. The non-detected result for PCB-1260 in the parent sample was qualified as estimated (UJ) for percent recovery failure. (QC Batch 94184)
3. The percent recoveries for PCB-1254 were outside the 65%-135% project acceptance criteria in QC samples 176011-002 MS/MSD. The parent sample was associated with a site unrelated to the project site, and qualification was not required. (QC Batch 96627)
4. The percent recovery for PCB-1254 was outside the project acceptance criteria in QC sample BB3EX153[0.5] (176248-003) MSD at 173%. The result for PCB-1254 in the parent sample was non-detect and qualification was not required. (QC Batch 96948)
5. The percent recoveries for PCB-1254 were outside the project acceptance criteria in QC samples BB3EX152[0.5] (176248-005) MS/MSD at 154% and 174%. The result for PCB-1254 in the parent sample was non-detect and qualification was not required. (QC Batch 96948)

See Table 2 of this report for a summary of qualifications due to matrix spike percent recovery and RPD failures.

G. Laboratory Control Samples

All QC criteria were met for the laboratory control samples associated with the project samples.

H. Surrogate Recoveries

Surrogate spike recoveries met QC acceptance criteria for all project samples, with the following exceptions:

1. Samples with non-detected results and high failing surrogate recoveries did not require qualification, and are not noted in this report.
2. The percent recoveries for surrogate decachlorobiphenyl (DCB) failed the 65%-135% project acceptance criteria in two samples. The compounds associated with surrogate DCB: PCB-1248, PCB-1254, and PCB-1260, were non-detect and qualified as estimated (UJ). The percent recoveries for surrogate 2,4,5,6-tetrachloro-meta-xylene (TCMX) failed the 65%-135% project acceptance criteria in one sample. The compounds associated with surrogate TCMX: PCB-1016, PCB-1221, PCB-1232 and PCB-1242, were non-detect and qualified as estimated (UJ). The following table lists the project samples and the failing surrogate recoveries.

Project Sample Name	Laboratory Sample ID	DCB % Recovery	TCMX % Recovery
BB3EX118[0.5]	174320-002	42	20
BB3EX130[0.5]	175037-003	61	75 (okay)

See Table 2 of this report for a summary of qualifications due to surrogate percent recovery failures.

I. Compound Identification and Quantitation

The samples highlighted in **bold** typeface in Table 1 received full, level IV data validation. This included re-calculation of initial and continuing calibrations, and surrogate values; in addition to re-calculation of all reported results for PCBs in these samples. If the project sample results were non-detected, the results for the QC samples were re-calculated and verified as correctly reported by the laboratory. For the samples that received full data validation, no problems were observed with compound identification and quantitation.

VII. Chlorinated Herbicides (8151A)

Overall, the data are usable as reported. Qualification was not required.

A. Reporting Limits

All laboratory reporting limits for chlorinated herbicides in soil matrix samples met the project required reporting limits. It should be noted that the reporting limits for all soils were raised due to dry weight correction.

B. Holding Times

Technical holding time criteria were met for all project samples.

C. Blanks
Target analytes were not observed in any laboratory method blanks associated with the project samples.

D. Initial Calibration
Initial calibration criteria were met for all calibration standards associated with the project samples. When data from two columns was presented and one had acceptable percent relative standard deviations (%RSD) and the other did not, unless clearly stated, it was assumed that the laboratory used the column in control for reporting of sample results.

E. Continuing Calibration
Continuing calibration criteria were met for all continuing calibration standards associated with the project samples, with the following exceptions:
1. Sample qualification was not required when continuing calibration standards failed high and were associated with samples with non-detect results. These failures were not noted in this report.
2. When data from two columns was presented and one had acceptable percent differences and the other did not, unless clearly stated, it was assumed that the laboratory used the column in control for reporting of sample results.

F. Matrix Spike/Matrix Spike Duplicate
All QC criteria were met for the matrix spikes and matrix spike duplicates associated with the project samples, with the following exceptions:
1. The percent recoveries for 2,4-D were outside the 65%-135% project acceptance criteria in QC samples 04-5335-2 MS/MSD. The parent sample was associated with a site unrelated to the project site, and qualification was not required. (QC Batch 04G4065)

G. Laboratory Control Samples
All QC criteria were met for the laboratory control samples associated with the project samples.

H. Surrogate Recoveries
Surrogate spike recoveries met QC acceptance criteria for all project samples.

I. Compound Identification and Quantitation
The samples highlighted in **bold** typeface in Table 1 received full, level IV data validation. This included re-calculation of initial and continuing calibrations, and surrogate values; in addition to re-calculation of all reported results for herbicides in these samples. If the project sample results were non-detected, the results for the QC samples were re-calculated and verified as correctly reported by the laboratory. For the

samples that received full data validation, no problems were observed with compound identification and quantitation.

VIII. Metals (6010B/7471A)

Overall, the data are usable as reported with any added qualifiers. Qualifications were required for the reasons noted in Sections D, E and H.

A. Reporting Limits

The laboratory reporting limits for metals in soil matrix samples met the project required reporting limits listed in Table 2-5.21-1 of the QAPP. It should be noted that the reporting limits for all soils were raised due to dry weight correction.

B. Holding Times

Technical holding time criteria were met for all project samples.

C. Blanks

Target analytes were not observed in any laboratory method blanks associated with the project samples.

D. Initial and Continuing Calibrations

All initial and continuing calibration standards associated with the project samples met QC acceptance criteria, with the following exception:

1. The 11/29/04 reporting limit check standard, also known as a CRI standard, analyzed on instrument MET07 had one metal with a percent recovery greater than the 70%-130% project acceptance criteria, selenium (145%). The associated project samples with values of selenium between the reporting limit and two times the reporting limit were qualified as estimated with a high bias (J+).

See Table 2 of this report for a summary of qualifications due to reporting limit check standard percent recovery failure.

E. Matrix Spike/Matrix Spike Duplicate

All QC criteria were met for the matrix spikes and matrix spike duplicates associated with the project samples, with the following exceptions:

1. The percent recoveries for antimony, barium, cobalt, copper and vanadium failed the 75%-125% acceptance criteria in QC samples BB3SS100[1] MS/MSD. The amount of copper present in the parent sample was greater than four times the amount spiked, and qualification was not required. The results for antimony, cobalt and vanadium in the associated samples were qualified as estimated with a low bias (J-/UJ). The detected results for barium in the associated samples were qualified as estimated with a high bias (J+). (QC batch 92496)
2. The percent recovery for lead failed the 75%-125% acceptance criteria in QC sample 173588-001 MS. The parent sample was associated with a site unrelated to the project site, and qualification of the project samples was not required. (QC batch 93111)

3. The percent recoveries for antimony and copper failed the 75%-125% acceptance criteria in QC samples 173729-004 MS/MSD. The parent sample was associated with a site unrelated to the project site, and qualification of the project samples was not required. (QC batch 93374)
4. The percent recoveries for antimony, barium, chromium, copper, nickel and vanadium failed the 75%-125% acceptance criteria in QC samples 173676-005 MS/MSD. The parent sample was associated with a site unrelated to the project site, and qualification of the project samples was not required. (QC batch 93417)
5. The percent recoveries for antimony, chromium and nickel failed the 75%-125% acceptance criteria in QC samples 173819-004 MS/MSD. The parent sample was associated with a site unrelated to the project site, and qualification of the project samples was not required. (QC batch 93498)
6. The percent recoveries for antimony, chromium, copper, nickel, vanadium and zinc failed the 75%-125% acceptance criteria in QC samples 173840-001 MS/MSD. The parent sample was associated with a site unrelated to the project site, and qualification of the project samples was not required. (QC batch 93529)
7. The percent recoveries for antimony failed the 75%-125% acceptance criteria in QC samples 173852-001 MS/MSD. The parent sample was associated with a site unrelated to the project site, and qualification of the project samples was not required. (QC batch 93570)
8. The percent recoveries failed the 75%-125% acceptance criteria in QC samples BB3EX111[0.5] MS/MSD for antimony and vanadium. The results for antimony and vanadium in the associated samples were qualified as estimated with a low bias (J-/UJ). (QC batch 93867)
9. The percent recoveries for antimony, cobalt, copper, nickel and zinc failed the 75%-125% acceptance criteria in QC samples 174065-001 MS/MSD. The parent sample was associated with a site unrelated to the project site, and qualification of the project samples was not required. (QC batch 93868)
10. The percent recoveries for antimony and nickel failed the 75%-125% acceptance criteria in QC samples BB3EX116[0.5] MS/MSD. The results for antimony and nickel in the associated samples were qualified as estimated with a low bias (J-/UJ). (QC batch 93868)
11. The percent recoveries for antimony, chromium, nickel and vanadium failed the 75%-125% acceptance criteria in QC samples BB3EX118[0.5] MS/MSD. The amount of nickel present in the parent sample was greater than four times the amount spiked, and qualification was not required. The results for antimony, chromium and vanadium in the associated samples were qualified as estimated with a low bias (J-/UJ). (QC batch 94198)
12. The percent recoveries for antimony failed the 75%-125% acceptance criteria in QC samples BB3EX121[0.5] MS/MSD. The non-detected results for antimony in the associated samples were qualified as estimated (UJ). (QC batch 94198)

13. The percent recoveries for antimony, iron, manganese and nickel failed the 75%-125% acceptance criteria in QC samples 174825-003 MS/MSD. The parent sample was associated with a site unrelated to the project site, and qualification of the project samples was not required. (QC batch 94861)
14. The percent recoveries for antimony, barium, cobalt, iron, manganese and nickel failed the 75%-125% acceptance criteria in QC samples BB3EX128[0.5] (175037-001) MS/. The amounts of iron, manganese and nickel present in the parent sample were greater than four times the amounts spiked, and qualification was not required. The results for antimony in the associated samples were non-detect and qualified as estimated (UJ). The detected results for barium and cobalt in the associated samples were qualified as estimated with a high bias (J+). (QC batch 95120)
15. The percent recoveries for antimony, copper, iron, manganese, nickel, vanadium and zinc failed the 75%-125% acceptance criteria in QC samples 174988-004 MS/MSD. The parent sample was associated with a site unrelated to the project site, and qualification of the project samples was not required. (QC batch 95280)
16. The percent recoveries for antimony, cadmium, chromium, cobalt, copper, iron, lead, manganese, molybdenum, nickel, vanadium and zinc failed the 75%-125% acceptance criteria in QC samples 174988-017 MS/MSD. The parent sample was associated with a site unrelated to the project site, and qualification of the project samples was not required. (QC batch 95280)
17. The percent recoveries for antimony, iron, manganese and zinc failed the 75%-125% acceptance criteria in QC samples 175833-002 MS/MSD. The parent sample was associated with a site unrelated to the project site, and qualification of the project samples was not required. (QC batch 96221)
18. The percent recoveries for antimony, chromium, cobalt, iron, lead, manganese, nickel and zinc failed the 75%-125% acceptance criteria in QC samples 175874-002 MS/MSD. The parent sample was associated with a site unrelated to the project site, and qualification of the project samples was not required. (QC batch 96263)
19. The percent recoveries for mercury failed the 75%-125% acceptance criteria in QC samples 175798-001 MS/MSD. The parent sample was associated with a site unrelated to the project site, and qualification of the project samples was not required. (QC batch 96342)
20. The percent recoveries for antimony and iron failed the 75%-125% acceptance criteria in QC samples 176109-002 MS/MSD. The parent sample was associated with a site unrelated to the project site, and qualification of the project samples was not required. (QC batch 96610)

21. The percent recoveries for antimony, barium, copper, iron, lead, manganese, vanadium and zinc failed the 75%-125% acceptance criteria in QC samples 176180-001 MS/MSD. The parent sample was associated with a site unrelated to the project site, and qualification of the project samples was not required. (QC batch 96876)
22. The percent recoveries for antimony, arsenic, barium, beryllium, chromium, cobalt, copper, iron, lead, manganese, molybdenum, nickel, selenium, silver, thallium, vanadium and zinc failed the 75%-125% acceptance criteria in QC samples BB3EX152[0.5] MS/MSD. The amounts of copper, iron and manganese present in the parent sample were greater than four times the amounts spiked, and qualification was not required. The detected results for barium in the associated samples were qualified as estimated with a high bias (J+). The results for antimony, arsenic, beryllium, chromium, cobalt, lead, molybdenum, nickel, selenium, silver, thallium, vanadium and zinc in the associated samples were qualified as estimated with a low bias (J-/UJ) for percent recovery failure. (QC batch 96915)
23. The percent recoveries for antimony, iron and manganese failed the 75%-125% acceptance criteria in QC samples BB3-CLLAB MS/MSD. The amounts of iron and manganese present in the parent sample were greater than four times the amounts spiked, and qualification was not required. The detected result for antimony in the associated sample was qualified as estimated with a low bias (J-) for percent recovery failure. (QC batch 97523)

See Table 2 of this report for a summary of qualifications due to matrix spike percent recovery failures.

F. Laboratory Control Samples

All QC criteria were met for the laboratory control samples associated with the project samples.

G. ICP Interference Check Standards

All QC criteria were met for the ICP interference check standards associated with the project samples.

H. ICP Serial Dilution

All QC criteria were met for the ICP serial dilutions associated with the project samples, with the following exceptions:

1. The percent difference for cadmium failed the 10% project acceptance criteria in QC sample 173676-005 at 42%. The parent sample was associated with a site unrelated to the project site, and qualification of the project samples was not required. (QC batch 93417).
2. The percent difference for cadmium failed the 10% project acceptance criteria in QC sample 173840-001 at 43%. The parent sample was associated with a site unrelated to the project site, and qualification of the project samples was not required. (QC batch 93529).

3. The percent difference for copper failed the 10% project acceptance criteria in QC sample BB3EX111[0.5] (174073-001) at 11%. The results for copper in the associated samples were qualified as estimated (J/UJ) due to serial dilution percent difference failure. (QC batch 93867)
4. The percent difference for copper failed the 10% project acceptance criteria in QC sample BB3EX125[0.5] (174631-001) at 21%. The results for copper in the associated samples were qualified as estimated (J/UJ) due to serial dilution percent difference failure. (QC batch 94604)
5. The percent difference for beryllium failed the 10% project acceptance criteria in QC sample BB3EX128[0.5] (175037-001) at 12%. The results for beryllium in the associated samples were qualified as estimated (J/UJ) due to serial dilution percent difference failure. (QC batch 95120)
6. The percent difference for beryllium failed the 10% project acceptance criteria in QC sample 174988-004 at 13%. The parent sample was associated with a site unrelated to the project site, and qualification of the project samples was not required. (QC batch 95280).
7. The percent difference for beryllium failed the 10% project acceptance criteria in QC sample 176180-001. The parent sample was associated with a site unrelated to the project site, and qualification of the project samples was not required. (QC batch 96876).
8. The percent difference for beryllium failed the 10% project acceptance criteria in QC sample BB3EX152[0.5] (176248-005) at 13%. The results for beryllium in the associated samples were qualified as estimated (J/UJ) due to serial dilution percent difference failure. (QC batch 96915)
9. The percent difference for beryllium failed the 10% project acceptance criteria in QC sample BB3-CLLAB (176656-002) at 26%. The detected result for beryllium in the associated sample was qualified as estimated (J) due to serial dilution percent difference failure. (QC batch 97523)

See Table 2 of this report for a summary of qualifications due to serial dilution percent difference failure.

I. Compound Identification and Quantitation

The samples highlighted in **bold** typeface in Table 1 received full, level IV data validation. This included re-calculation of all reported results for metals in these samples. For the samples that received full data validation, no problems were observed with compound identification and quantitation.

The following paragraphs highlight the essential findings of the field duplicate samples:

Field duplicate precision was evaluated by calculating the relative percent difference (RPD) between detected results in the original sample and its associated duplicate. The control limit used for field duplicates was a relative percent difference less than or equal to 50 percent, or the absolute difference of the two results must be less than the twice the reporting limit for those analytes that were at or near the detection limit. Eight samples were collected in duplicate for the Baker Beach 3 and 4 Sites.

Project Sample Primary ID	Lab Sample ID	Project Sample Duplicate ID	Lab Sample ID
BB3EX108[0.5]	173857-001	DUP080504A	173857-002
BB3EX120[0.5]	174320-004	DUP083004A	174320-005
BB3EX131[0.5]	175037-004	DUP100104A	175037-005
BB4EX100[0.5]	175141-001	DUP100704A	175141-009
BB3EX143[0.5]	175836-003	DUP110504A	175836-004
BB3EX150[2.5]	176210-009	DUP112204A	176210-010
BB3EX154[0.5]	176248-001	DUP112304A	176248-002
BB3EX156[0.5]	176702-001	DUP121604A	176702-002

The attached Table 3 summarizes the field duplicate sample results. The detected results of the original sample and the associated duplicate sample were compared and the calculated RPDs reported. All RPDs met the 50 percent precision control limit requirement, with the following exceptions:

1. In field duplicates BB3EX120[0.5] and DUP083004A, the RPD between the detected results failed the 50% acceptance criteria for zinc at 81%.
2. In field duplicates BB3EX143[0.5] and DUP110504A, the RPDs between the detected results failed the 50% acceptance criteria for barium at 75% and lead at 74%.
3. In field duplicates BB3EX150[2.5] and DUP112204A, the RPD between the detected results failed the 50% acceptance criteria for lead at 55%.

The analysis of field duplicate samples is a measure of both field and analytical precision. The imprecision in the results in the field duplicate pairs listed above may be due to the sample matrix, sample non-homogeneity, sampling or laboratory technique, or method defects. Since the effect on the quality of the data is not known, data is not qualified for field duplicate failure.

SUMMARY

The attached Table 1 lists the samples and analyses included in the data validation effort. The attached Table 2 summarizes the data qualifications of all project samples for each test method included in the data packages.

USABILITY

The quality control criteria were reviewed, and other than those discussed above, all criteria were met and the data are considered acceptable. Estimated sample results (J/UJ) are usable only for limited purposes. Based upon the cursory and full levels of data validation, all other results are considered valid and usable for all purposes.

VALIDATION QUALIFIERS IDENTIFICATION

The definitions of the following qualifiers are prepared according to the document, "USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review," October, 1999.

U The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample. *A minus sign (-) indicates the numerical value has a low bias. A plus sign (+) indicates the numerical value has a high bias.*

N The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification."

NJ The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

Table 1
Sample Summary
Baker Beach 3 and 4
The Presidio of San Francisco, CA

Site Sample ID	Lab Sample ID	Date Sampled	Analyses	Sample Type
BB3EX152[0.5]	176248-005	23-Nov-04	Pesticides (8081A), PCBs (8082), Total Metals (6010B)	Soil
TB112304A	176248-006	23-Nov-04	Volatile Organic Compounds (8260B)	Trip Blank
BB3EX155[0.5]	176656-001	15-Dec-04	Pesticides (8081A)	Soil
BB3-CLLAB	176656-002	15-Dec-04	TPH-Gasoline (8015B), TPH-Extractable (8015B), Total Metals (6010B)	Soil
BB3EX156[0.5]	176702-001	16-Dec-04	Pesticides (8081A), PCBs (8082)	Soil (8)
DUP121604A	176702-002	16-Dec-04	Pesticides (8081A), PCBs (8082)	FD (8)

VOCs: Volatile Organic Compounds
SVOCs: Semi-volatile Organic Compounds
TPH: Total Petroleum Hydrocarbons
MO: Motor Oil
PCBs: Polychlorinated Biphenyls
STLC: Soluble Threshold Limit Concentration (Waste Extraction Test, WET)
FD: Field duplicate of previous numbered sample, (1), (2), etc.

QUALITY CONTROL SUMMARY REPORT FOR THE BAKER BEACH GROUNDWATER SAMPLING EVENT, THE PRESIDIO OF SAN FRANCISCO, CA

LABORATORY: Curtis & Tompkins, Ltd., Berkeley, CA

SAMPLING DATES: December 14, 16 and 17, 2004

Data validation of Level III laboratory data packages was performed according to the project-specific guidelines. These guidelines were outlined in the Presidio-wide Quality Assurance Project Plan, Sampling and Analysis Plan, April, 2001; the U. S. Environmental Protection Agency Contract Laboratory Program National Functional Guidelines for Organic Data Review, October, 1999; and the U. S. Environmental Protection Agency Contract Laboratory Program National Functional Guidelines for Inorganic Data Review, July 2002.

The data were reviewed for holding times, blanks, GC/MS tunes, initial calibrations, continuing calibration verification (CCV) standards, internal standards, laboratory duplicate samples, laboratory control samples (LCS), surrogate recoveries, matrix spikes (MS), matrix spike duplicates (MSD), ICP interference check standards and ICP serial dilutions.

The following paragraphs highlight the essential findings of the data validation effort:

I. <u>Volatile Organic Compounds by GC/MS (8260B)</u>

Overall, the data are usable as reported. Qualification was not required.

A. <u>Reporting Limits</u>

The laboratory reporting limits for VOCs in water matrix samples met the project required reporting limits, with the following exceptions:

1. The laboratory reporting limits did not meet the project required reporting limits listed in Table 2-6.8-1 of the QAPP for bromoform, bromomethane, chloroethane, and chloromethane. The laboratory reported 1.0 ug/L for these compounds. The project required reporting limit was 0.5 ug/L.

B. <u>Holding Times</u>

Technical holding time criteria were met for all project samples.

C. Surrogate Recoveries
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. Blanks
Target analytes were not observed in any laboratory method blanks associated with the project samples. Target analytes were not observed in any trip blanks associated with the project samples.

E. Laboratory Control Samples
All QC criteria were met for the laboratory control samples associated with the project samples.

F. Matrix Spike/Matrix Spike Duplicate
A matrix spike and matrix spike duplicate were not analyzed with the project samples for this analysis.

G. GC/MS Tunes
All QC criteria were met for the GC/MS tunes associated with the project samples.

H. Initial Calibration
Initial calibration criteria were met for all calibration standards associated with the project samples.

I. Continuing Calibration
Continuing calibration criteria were met for all continuing calibration standards associated with the project samples.

J. Internal Standards
Internal standard areas and retention times met QC acceptance criteria for all project samples.

II. Total Petroleum Hydrocarbons - Gasoline (8015B)

Overall, the data are usable as reported. Qualification was not required.

A. Reporting Limits
The laboratory reporting limit for gasoline in water matrix samples met the project required reporting limit.

B. Holding Times
Technical holding time criteria were met for all project samples.

C. Surrogate Recoveries
Surrogate spike recoveries met QC acceptance criteria for all project samples. Samples with non-detected results and high failing surrogate recoveries did not require qualification, and are not noted in this report.

D. Blanks
Target analytes were not observed in any laboratory method blanks associated with the project samples.

E. Laboratory Control Samples
All QC criteria were met for the laboratory control samples associated with the project samples.

F. Matrix Spike/Matrix Spike Duplicate
All QC criteria were met for the matrix spikes and matrix spike duplicates associated with the project samples.

G. Initial Calibration
Initial calibration criteria were met for all calibration standards associated with the project samples.

H. Continuing Calibration
Continuing calibration criteria were met for all continuing calibration standards associated with the project samples.

III. Total Petroleum Hydrocarbons – Diesel/Motor Oil (8015B)

Overall, the data are usable as reported. Qualification was not required.

A. Reporting Limits
The laboratory reporting limit for diesel and motor oil in water matrix samples met the project required reporting limit.

B. Holding Times
Technical holding time criteria were met for all project samples.

C. Surrogate Recoveries
Surrogate spike recoveries met QC acceptance criteria for all project samples.

D. Blanks
Target analytes were not observed in any laboratory method blanks associated with the project samples.

E. Laboratory Control Samples
All QC criteria were met for the laboratory control samples associated with the project samples.

F. Matrix Spike/Matrix Spike Duplicate
All QC criteria were met for the matrix spikes and matrix spike duplicates associated with the project samples.

G. Initial Calibration
Initial calibration criteria were met for all calibration standards associated with the project samples.

H. Continuing Calibration
Continuing calibration criteria were met for all continuing calibration standards associated with the project samples.

IV. Total and Dissolved Metals (6020)

Overall, the data are usable as reported with any added qualifiers. Qualification was required for the reason noted in Section G.

A. Reporting Limits
The laboratory reporting limits met the project required reporting limits for metals in water matrix samples listed in Table 2-5.21-1 of the QAPP, with the following exception:

1. The result for chromium in sample BB3PZ101 (176728-001) was reported as non-detected at a ten-fold dilution due to a failing continuing calibration standard in the undiluted run.

B. Holding Times
Technical holding time criteria were met for all project samples.

C. Blanks
Target analytes were not observed in any laboratory method blanks associated with the project samples.

D. Laboratory Control Samples
All QC criteria were met for the laboratory control samples associated with the project samples.

E. Matrix Spike/Matrix Spike Duplicate
All QC criteria were met for the matrix spikes and matrix spike duplicates associated with the project samples, with the following exceptions:

1. The percent recoveries for calcium, magnesium and sodium failed the 75%-125% project acceptance criteria in QC samples LF4GW103 (176662-001) MS/MSD. The amounts of calcium, magnesium and sodium present in the parent sample were greater than four times the amounts spiked, and qualification was not required. (QC batch 97537)
2. The percent recoveries for calcium, magnesium, manganese and sodium failed the 75%-125% project acceptance criteria in QC samples 1349MW102 (176726-004) MS/MSD. The amounts of calcium, magnesium, manganese and sodium present in the parent sample were greater than four times the amounts spiked, and qualification was not required. (QC batch 97646)

F. ICP Interference Check Standards
All QC criteria were met for the ICP interference check standards associated with the project samples.

G. ICP Serial Dilution
All QC criteria were met for the ICP serial dilutions associated with the project samples, with the following exception:
1. The percent difference for calcium failed the 10% project acceptance criteria in QC sample LF4GW103 (176662-001) at 14%. The detected result for calcium in the associated sample was qualified as estimated (J).

See Table 2 of this report for a summary of qualifications due to serial dilution percent difference failure.

H. Initial and Continuing Calibrations
All initial and continuing calibration standards associated with the project samples met QC acceptance criteria.

V. General Chemistry (Alkalinity by 310.1, Anions by 300.0 and TDS by 160.1)

Overall, the data are usable as reported. Qualification was not required.

A. Reporting Limits
The laboratory reporting limits for alkalinity, anions and total dissolved solids met the project required reporting limits.

B. Holding Times
Technical holding time criteria were met for all project samples.

C. Blanks
Target analytes were not observed in any laboratory method blanks associated with the project samples.

D. Laboratory Control Samples
All QC criteria were met for the laboratory control samples associated with the project samples.

E. Matrix Spike/Matrix Spike Duplicate
All QC criteria were met for the matrix spikes and matrix spike duplicates associated with the project samples.

F. Laboratory Duplicate Samples
All QC criteria were met for the laboratory duplicate samples associated with the project samples.

G. Initial and Continuing Calibrations
All initial and continuing calibration standards associated with the project samples met QC acceptance criteria.

SUMMARY

The attached Table 1 lists the samples and analyses included in the data validation effort. The attached Table 2 summarizes the data qualifications required for the project samples included in the data packages.

USABILITY

The quality control criteria were reviewed, and other than those discussed above, all criteria were met and the data are considered acceptable. Estimated sample results (J/UJ) are usable only for limited purposes. Based upon the cursory validation, all other results are considered valid and usable for all purposes.

VALIDATION QUALIFIERS IDENTIFICATION

The definitions of the following qualifiers are prepared according to the document, "USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review," October, 1999.

U The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample. *A minus sign (-) indicates the numerical value has a low bias. A plus sign (+) indicates the numerical value has a high bias.*

N The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification."

NJ The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

ADDENDUM TO REPORT DATED JANUARY 31, 2005

QUALITY CONTROL SUMMARY REPORT FOR THE BAKER BEACH GROUNDWATER SAMPLING EVENT, THE PRESIDIO OF SAN FRANCISCO, CA

LABORATORY: Curtis & Tompkins, Ltd., Berkeley, CA

SAMPLING DATES: December 16 and 17, 2004

Data validation of Level III laboratory data was performed according to the project-specific guidelines. These guidelines were outlined in the Presidio-wide Quality Assurance Project Plan, Sampling and Analysis Plan, April, 2001; and the U. S. Environmental Protection Agency Contract Laboratory Program National Functional Guidelines for Inorganic Data Review, July 2002.

The data were reviewed for holding times, blanks, initial calibrations, continuing calibration verification (CCV) standards, laboratory control samples (LCS), matrix spikes (MS), matrix spike duplicates (MSD), ICP interference check standards and ICP serial dilutions.

This report reflects the data validation of samples BB3PZ101 and BB3SW102 re-analyzed for dissolved metals on March 3, 2005.

The following paragraphs highlight the essential findings of the data validation effort:

I. <u>Dissolved Metals (6020)</u>

Overall, the data are usable as reported. Qualification was not required.

A. <u>Reporting Limits</u>

The laboratory reporting limits met the project required reporting limits for metals in water matrix samples listed in Table 2-5.21-1 of the QAPP.

B. <u>Holding Times</u>

Technical holding time criteria were met for all project samples.

C. <u>Blanks</u>

Target analytes were not observed in any laboratory method blanks associated with the project samples.

D. <u>Laboratory Control Samples</u>

All QC criteria were met for the laboratory control samples associated with the project samples.

E. Matrix Spike/Matrix Spike Duplicate
All QC criteria were met for the matrix spikes and matrix spike duplicates associated with the project samples, with the following exception:
1. The percent recoveries for sodium and magnesium were outside the 75%-125% project acceptance criteria in QC samples BB3SW102 MS/MSD. The amounts of these metals present in the parent sample were greater than four times the amounts spiked, and qualification was not required.

F. ICP Interference Check Standards
All QC criteria were met for the ICP interference check standards associated with the project samples.

G. ICP Serial Dilution
All QC criteria were met for the ICP serial dilutions associated with the project samples.

H. Initial and Continuing Calibrations
All initial and continuing calibration standards associated with the project samples met QC acceptance criteria.

SUMMARY
Qualification was not required for the re-analyzed results of samples BB3PZ101 and BB3SW102.

USABILITY
The quality control criteria were reviewed. All criteria were met and the data are considered acceptable. Based upon the cursory validation, all results are considered valid and usable for all purposes.

Description of Work: Prepare site for work

- Excavate and stockpile material on bench. Create a flat turn around area on bench, Stockpile as Class I material. PerfEx using personal air monitoring

- Use excavator to pot hole three locations to collect samples of "old" chert road to see if it is salvageable for reuse. Chert surface is approx. 0.5 and 1.5 feet below truck turn around surface. Collect a chert sample and underlying native sand sample from each of three pot hole (BB3SS100, BB3SS101, and BB3SS102) chert samples from 1, 1.5, and 1.5 ft, respectively. Sand samples from 2, 2.5, and 2.5 ft, respectively. The samples are analyzed for BB3 COCs (metals, PCBs, and pesticides, 48 hr TAT.

Received a complaint from a bicyclist (Dr Robert Gish, MD)claim he was cut off and had to skid to a halt to avoid a Clearwater truck (#630) coming out of Bowley. Took his name and number and said someone would be contacting him. Talked to the driver, he said he thought that the bicyclist was stopping to give him the right-of-way. Told Cliff, ask Cliff to talk to all drivers and remind them they are in a public park, be careful. Jennifer made the follow up call.

Site meeting walk with Bob Boggs, Brian U, Tony D, Craig C, and Jenn. Show existing sample locations.. Agree that perimeter samples will be collected within 3 ft of the excavation limits. Agree that samples BB3EX100/106 too far in to be perimeter sample need to sample closer to limits. Agree that samples BB3EX103, BB3EX107 will be dual perimeter and grid samples. Agree to Bob's request that a row of samples will be collected down the center of the valley, approximately midway between grid lines C and D. Agree to Bob's request to excavate addional material from gray sand area at bottom. Find old bones, call archeologist, old soup bones.

Construction meeting.

Wendell and Scott Walker walk site observe slope stability, no problems.

Description of Work: Expose chert road

- No truck offhaul today, NPS tree cutting crew will be falling near Lincoln Blvd, do not want the truck active.

- Crew spend day (short day) exposing the historical chert road, starting from the work limits near Battery Crosby. Road appears to be yellow weathered serpentine under chert.

Light rain over weekend, no apparent effects at either site.

Project: Presidio Baker Beach Disturbed Areas 3 and 4 Project No: 2893.12
Subject: **CONSTRUCTION OBSERVATION DAILY REPORT** Date: 10/19/04, Tuesday
Field Engineer: Michael Chamberlain (MAC) To:
Time: Weather:
Reviewed by: Date:

Description of Work: rain day -

No site work, moderate rain most of day.

By mid-day a large rill has formed on middle of northern flank, approx 6 ft wide, 4 ft deep at slope break. No sediment offsite. An old drain pipe (clay, 3" dia) pound flowing on upper northern flank from Battery. It appears to be the source of the water for the willows on the northern flank. Most of pipe is broken in half (by excavator), no location of pipe outfall.

Construction meeting.

Following construction meeting proceed to site. Meet at BBDA 4 with George, Jenn, Wendell, Lew and Herman (NPS Roads). Discuss erosion control/slope stability issues at site. The plan is to have the Trust concrete up fill DI and install a asphalt "speed bump" across Btty Chamberlin Rd to keep Lincoln runoff in v-ditch. The NPS will build up the foot path to keep water on Lincoln and not flow down Btty Chamberlin Rd.

Description of Work: Offhaul Class II soil. Install Erosion Control at BBDA 3

- Load out 40 trucks for Class II disposal .
- Use a hand level to shoot in 60, 70, 80, 90, 100, 110 ft topographic contour, use survey stake on set in BBDA 3 ravine as control. Install wattles on contour.
- Install 2 silt fences, spaced 100 ft apart starting from the eastern silt fence around willow mat.
- Install erosion fabric across BBDA 3 slope between second and third silt fence from bottom. Each panels run perpendicular to the fall of the ravine and extends up the flank 5 ftt vertical of ravine centerline.

Wendell and Lew agree that only the lower portion need fabric. Wendell also wants to add wattles on the 5 ft contour lines from the third silt fence to the mid-slope bench.

Description of Work: Remove portion of old chert road.

- Crew excavates and removes portion of historical Btty Crosby Rd that failed cleanup levels. Approx. 160 of road was removed, from mid-point of BB3EX142/BB3EX145 and BB3EX147/BB3EX151. Stockpile material on plastic near wattle stockpile area and cover.

Collect Soil Confirmation sample:

BB3EX155[0.5] at over-ex BB3EXD145[1.0], sand, pesticides
Also, Jenn wanted a sample of the Clearlake lava rock analyzed.
Submit sample BB3-CLLAB for metals, TPHs, and pH.

Map BBDA 3 erosion control installation.

Description of Work: Scraping knoll, DTSC review.

- Crew onsite to complete scraping and reset erosion control Scrape most of the northern flank to remove random surface chert and debris.

- Reset displaced wattles on northern flank. Add additional wattles over scraped area. Wattles placed on topographic contour using hand level.

1100 @ Building 1750, data meeting with DTSC. Attending: George, Jenn, Brian, Mike, Bob Boggs and Dan Murphy. A review of the BBDA 3 data indicates all conformation samples are acceptable for clean closure, some low exceedances but acceptable. DTSC only question was whether the NPS had an issue with the vanadium exceedances at BB3EX141[2.5] and BB3EX141[5.5]. Brian said it was not an issue to the NPS. DTSC agreeable that no further soil sampling is required.

1200 all go to site to walk if over. No issues arise. No additional sampling required.

Description of Work: Repair Erosion Control.

- Crew onsite to maintain silt fences. The flow from the seeps approx 5-7 gpm at toe of slope. The entire toe of the northern flank is seeping. There is a wet zone about 2 feet thick at the toe of the northern flank. Pretty much at the dune sand/Colma contact. Cliff would like to install a collection dam at the main seep .

- Reset displaced wattles on northern flank. Add additional wattles over scraped area. Wattles placed on topographic contour using hand level.

1100 @ Building 1750, data meeting with DTSC. Attending: George, Jenn, Brian, Mike, Bob Boggs and Dan Murphy. A review of the BBDA 3 data indicates all conformation samples are acceptable for clean closure, some low exceedances but acceptable. DTSC only question was whether the NPS had an issue with the vanadium exceedances at BB3EX141[2.5] and BB3EX141[5.5]. Brian said it was not an issue to the NPS. DTSC agreeable that no further soil sampling is required.

1200 all go to site to walk if over. No issues arise. No additional sampling required.

Description of Work: Seep Piping

Check on site conditions 0730. Notice a small hole in slope at seep. Hole approx 6 inch diameter, flowing with water and sand. Within 5 mins., a second hole opens on slope about 6 ft above first. Second hole is vertical to slope. The seep appears to be piping. Return to office, discuss situation with Scott Walker, engineer. 0830 email Jenn and PerfEx informing of seep piping. Return to site with Scott 1030, a second set of holes has opened parallel and west of first set. Check using probe if an actual pipe is buried in slope, none found. The flow is constant 5-7 gpm, water and sand. 1100 George Ford onsite to observe seep. Discuss situation, Scott believes there is no immanent threat of slope failure. We will monitor seep over the next few days. 1400 return to site with Wendell and Jenn, no apparent change in seep flow. .

Description of Work: Monitoring Final Erosion Control

Check site before incoming rain, no site work. Site secured, however diversion pipe has been parted at upper 40 ft location. PerfEx says they did not part pipe. Lew said he would reconnect pipe. He said he prefers that the pipe stay as long as possible. The diverted water helps in planting the areas in the ravine by keeping the area dry.

Description of Work: Monitoring Final Erosion Control

Check site, moderate – heavy rain all day. Diversion pipe still parted at upper 40 ft location, Lew was unable to re-connect. Onsite with Jenn. Check dams begin impacted from seep flow. Re-connect diversion pipe. Several of the dams will need to be repaired. Jenn and I make some adjustments to the some of the dams to reduce and direct seep flow.PerfEx says they did not part pipe. Lew said he would reconnect pipe. He said he prefers that the pipe stay as long as possible. The diverted water helps in planting the areas in the ravine by keeping the area dry.

Description of Work: Monitoring Final Erosion Control

Check site, Re-connection of diversion pipe still together and reducing seep flow. Check dams and silt fences will need to be dug out and or repaired. Wendell onsite. Walk site, requests that the crew dig out impacted wattles. Dig out the centers of the sediment basins behind the check dams and add a single row of sand bags to the top of the dams, except for the very center. Leave a gap of one or two sand bags to direct the flow of the seep water to the center of all dams. Two of the check dams have been eroded under and around the southern end. Need to dig out and re-construct the southern ends. Wendell said that his official approval for the final erosion control was during his last site visit, Wednesday, 2/9/05. No work on approval for Battery Crosby Road design.

Description of Work: Site Meeting with PerfEx

Site meeting with Jenn, Lance, Cliff. The group decision is to hold off on construction of the post and cable fence at the toe of the slope until the Battery Crosby Rd is constructed and install in conjunction with the road post and cable fence. Need to move the large stockpile of wattle to a location Jenn yet to identify. Need to install asphalt "speed bump" at BBDA 4 parallel and under Battery Chamberlin Rd gate, this is to keep water running on Lincoln Ave in the v-ditch and not on Battery Chamberlin Rd. Also, fill in the DI at Battery Chamberlin Rd with asphalt. Also, repair damaged Battery Crosby Rd enterance guard rail.

Description of Work: Monitor and Repair Erosion Control

Check site for effects of over weekend rain, light to moderate. Had to modify the diversion pipe collection dam. The piping failure is beginning to settle down. The sand is de-watering and concentration flow along the southern edge of the "fan". Upon arrival, all flow of water was missing the collection dam. Added a collection trough using sand bags to direct flow to diversion pipe. Additionally, had to repair two silt fences at the toe of the slope. Repair the lower middle two silt fences using sand bags. The fences had become undercut from the increased water flow with no water being diverted. A noticeable reduction of the flow of water was observed by the time I depart.

Description of Work: Complete Erosion Control at BBDA 4

PerfEx onsite with hot asphalt to install "speed bump" runoff diversion across Battery Chamberlin Road. Fill DI at north side of Lincoln Boulevard and Battery Chamberlin Road. DI full of dirt. Dig out dirt, approximately 18 inches. Fill DI box with hot asphalt and compact. Crew paints asphalt with bituminous oil before placing hot asphalt for "speed bump". Speed bump is positioned parallel with the pole gate guarding Battery Chamberlain Road and extends approximately 1 foot towards Lincoln Boulevard. Jennifer onsite to check on installation.

Description of Work: Check Site Erosion Control

On site to check erosion control. Wendell suppose to walk site. We miss each other, but discuss site on the phone. The diversion pipe is functioning well. The capture dam seem to be collecting sufficient flow ~ 1 gpm. The check dams are all full, they'll need to be emptied. The water that flows down the ravine soaks in before exiting the site. Flow off site is from below thw silt fence, no surface flow observed. The wattles and silt fences on the upper slopes have sand dunes forming on the up slope side from blowing winds. Jennifer onsite to check on site.

APPENDIX E

Results of the Baker Beach Disturbed Areas 3 and 4 Bird Survey

(Jeffery Steinman, February 2004)

Results of the
Baker Beach Disturbed Areas 3 and 4
Bird Survey

Prepared For:
The Presidio Trust
P.O. Box 29052
34 Graham Street
San Francisco,
CA 94129

Prepared By:
Jeff Steinman
734 27th Street
San Francisco,
CA 94131

BACKGROUND

As part of the environmental cleanup process, the Presidio Trust has designated several areas containing contaminated fill and debris to be cleaned up and restored to a more historical condition. Among those areas proposed for clean up are Baker Beach Disturbed Areas 3 and 4(BBDA3&4), a six to seven-acre gully located on the West side of Lincoln Blvd. on the West side of the presidio.

The cleanup of BBDA3&4 will consist of the removal of land fill and a recontouring of the naturally occurring gully. To accomplish this, approximately forty trees will need to be removed. The trees are made up of Monterey pine, Monterey cypress, acacia, lollipop trees and eucalyptus sp. Although all of these species are non-native to the Presidio, they may be providing breeding or foraging habitat for special status avian species. BBDA3&4 is surrounded by coastal scrub and willow riparian habitat, two habitat types that are disappearing throughout California and are known to harbor a number of special status species. In addition, there are a number of owl and raptor species that are known to inhabit the Presidio, but little is known about the location of their territories. This is particularly true of owl species.

The Presidio Trust recognized the need for a biological survey of avian species to be conducted. The results of that study are presented here.

METHODS

Prior to the start of surveying, a list of special-status or locally rare birds for San Francisco was compiled. Bird species that are associated exclusively with aquatic habitats were not included in this list. Aquatic bird species that may use non-aquatic habitats for foraging or breeding were included (the black-crowned night-heron for example). Several sources were consulted to create the list. These are: The California Natural Diversity Database (California Department of Fish and Game, version 3. 0 .3, 2003); The San Francisco Breeding Bird Atlas (2002 San Francisco Field Ornithologists); The California Bird Species of Special Concern Report by the California Department of Fish and Game, (2002); as well as Audubon's 1996 Blue List and 2003 Watch List. The complete list of these species can be found in Tables 1A and 1B at the end of the section.

The survey effort took place as close to the commencement of tree removal as possible, in order to eliminate the possibility of nest construction between the end of the survey effort and the beginning of tree removal. The survey effort consisted of two diurnal or day-time surveys and two nocturnal or night-time surveys. This methodology was selected in order to maximize the potential for detecting both nocturnal and diurnal species.

The diurnal surveys took place preceding sunrise and consisted of an auditory and visual stand search with a special emphasis placed upon any signs indicative of foraging or breeding behavior (e.g., territoriality, nest structures, plucking posts, pellets, or white wash). Any breeding or foraging behavior was noted as well as all species encountered.

The nocturnal surveys took place in the four hours between eight p.m. and midnight, and consisted of broadcast acoustical surveys utilizing the vocalizations of owl species that may be found in the area. These are great horned owls, Western screech owls, and barn owls. Four call points were established that afforded maximum coverage of the study area. Each call point was surveyed by spending an initial fifteen minutes listening for owls, followed by broadcasting a short series of owl calls, followed by a five-minute period of listening for owls and then broadcasting another series of owl calls. Each owl's calls were broadcast several times before switching species and each call point was surveyed for 45 minutes. In order to minimize the effect the great-horned owl vocalizations would have upon the responsiveness of the other owl species, all call points were surveyed starting with Western screech-owls followed by barn owls and ending with great-horned owls.

Table 1A: Non-aquatic Special-status Bird Species of San Francisco

Black-crowned Night-Heron	Tri-colored Black Bird	Rufous Hummingbird
White-tailed Kite	Grasshopper Sparrow	Hermit Warbler
Ferruginous Hawk	Bells Sage Sparrow	Yellow Warbler
Sharp-shined Hawk	Lark Sparrow	Olive-sided Flycatcher
Cooper's Hawk	Alameda Song Sparrow	Western Wood-Pewee
Red-shouldered Hawk	Hairy Woodpecker	Willow Flycatcher*
Merlin	Purple Martin*	Pacific-slope Flycatcher
American-peregrine Falcon*	Vaux's swift	Loggerhead Shrike
Band-tailed Pigeon	Bank Swallow*	Bewick's Wren
Barn Owl	Allen's Hummingbird	Wren-tit

(*Indicates a federal or state-listed threatened or endangered species)

Table 1B: Non-aquatic bird species which are locally rare in San Francisco

Red-tailed Hawk	Spotted Towhee	Hutton's Vireo
Western screech-Owl	Black-headed Grosbeak	Warbling Vireo
Great horned Owl	Northern Flicker	Winter Wren
Ash-throated Flycatcher	Red-breasted Nuthatch	California Quail
Stellers Jay	Savannah Sparrow	Hooded Oriole
Violet-green Swallow	Northern Rough-winged Sparrow	Bullock's Oriole
Cliff Swallow	Lazuli Bunting	Red Crossbill

RESULTS

The Diurnal or day-time surveys took place on February 4th through 6th and resulted in the detection of 18 different bird species. The bird species encountered are listed in Table 2, which also includes; the visit number in which they were observed, their location relative to the survey areas stand of trees and whether they were displaying signs of foraging or breeding behavior.

There were no threatened or endangered species encountered during the survey effort. There were several special-status species encountered, a sharp-shinned hawk and a red–shouldered hawk. Both the sharp-shinned hawk and red-shouldered hawk were on Audubon's Blue List as species of special concern. Neither of these birds was seen using the project area, however. There were three locally rare species detected, a spotted towhee, a pair of red-tailed hawks and several Hutton's vireos. The red-tailed hawk was not using the project area and the spotted towhee was only observed utilizing the coastal-scrub habitat adjoining the project area. The Hutton's vireos were observed foraging in the project area but none of the males were ever heard singing or seen defending any territories (signs indicative of breeding). The only bird exhibiting signs of possible breeding behavior was Anna's hummingbirds, of which two different males were seen performing courtship displays.

The nocturnal surveys took place on the 4th and 5th of February. The surveys resulted in no owl responses during either of the two visits.

Table 2: Birds Observed during Survey

Bird Species	Visit 1	Visit 2	In Stand	Out of Stand	Foraging	Breeding
White-crowned Sparrow	X	X	X	X	X	
Dark-eyed Junco	X		X	X	X	
Anna's Hummingbird	X	X	X	X	X	X
Winter Wren	X	X	X		X	
Hutton's Vireo	X	X	X		X	
Song Sparrow	X	X	X	X	X	
Northern Flicker	X	X	X	X		
Bushtit	X	X	X	X	X	
House Finch	X	X	X		X	
Western Scrub Jay	X	X	X	X	X	
Black-headed Phoebe	X	X		X	X	
Chestnut-backed Chickadee		X	X		X	
Ruby-crowned Kinglet		X	X		X	
Spotted Towhee		X		X		
Common Raven		X		X		
Red-shouldered Hawk		X		X		
Red-tailed Hawk		X		X		
Sharp-shinned Hawk		X		X		

CONCLUSION

The results of the survey effort indicate that there were no special-status species utilizing the project area. The only locally rare species utilizing the area were the Hutton's vireos, which were foraging in the stand but were not singing or defending a territory, signs indicative of breeding. Additionally, the Breeding Bird Atlas recorded March 1st as the earliest date of Hutton's vireos nesting in San Francisco.

The Hawk species in the surrounding area could possibly utilize the trees in the project area as perches for hunting, but such behavior was never observed. All observations took place outside the project area in much larger stands of Monterey Cyprus and Eucalyptus sp. that are much more likely to support successful breeding attempts and certainly supply lots of perches for foraging. A red-shouldered hawk was seen chasing two red-tailed hawks in a near by stand, a sign that the red-shouldered hawk may be defending a territory, however no nest-like structure could be located in the area where this occurred. Furthermore, the Breeding Bird Atlas indicates February 22nd as being the earliest that breeding has been confirmed for the red-shouldered hawks in San Francisco.

Anna's hummingbirds, a wide spread and common species through out San Francisco were the only bird species that may have been breeding in the project area during the survey period, with two males observed performing courtship displays. The Breeding Bird Atlas however explains that the courtship display of males can be seen as early as December but that breeding had not been confirmed in San Francisco until the 22nd of February. It is however not unconceivable that the Anna's hummingbirds had an active nest.

The timing of the survey effort and the subsequent tree removal were an important component to the results of this study. If either of these activities had occurred at a latter date then it is certain that more breeding activity would have been observed, and it is conceivable that locally rare or special-status species may have been found utilizing the area for breeding purposes. The restoration of Baker Beach Disturbed Areas 3 and 4 to a more pristine condition however will undoubtedly create more contiguous habitat for the bird species of the Presidio. This will undoubtedly change the species composition of the area perhaps encouraging the return of some of the sage-scrub and willow-riparian dependent species.

Notes
mg/kg - milligrams per kilogram
µg/kg - micrograms per kilogram
mg/L - milligrams per liter
µg/L - micrograms per liter
BTEX - benzene, toluene, ethylbenzene, and xylenes
PCBs - Polychlorinated biphenols
TCLP - Toxicity Characteristic Leaching Potential

TEPH - Total Extractable Petroleum Hydrocarbons
SVOCs - Semi-volatile organic compounds
VOCs - Volatile organic compounds
WET - Waste Extraction Test
NA - Not analyzed (multiple analytes)
" - " - Not analyzed (single analyte)
" -- " - No applicable waste criteria

ND - Not detected; reporting limits vary
OCPs - Organochlorine pesticides
Bold - Indicates an exceedance of state waste criteria
in-situ - Waste profile sample collected from a pot hole or test pit.
stockpile - 4-point composite sample collected from waste soil stockpile
confirmation - Confirmation sample results used for waste profile of over-excavated soil.

* Single detection in suite; value of single detection is shown.
** Multiple detections in suite; value of highest detection is shown.
1) Analytical results for soil samples collected from test pits at BBDA 3 in November 2003 were also used for waste characterization purposes. See Table 1 of *Technical Memorandum: Historical Battery Crosby Road and Lead Exploratory Test Pit Excavation Observation and Results* (Treadwell & Rollo, 2004e).

Contractor's Submittal No. 1300-9A1

Contract No. PT-2004-024
PO#_____

Baker Beach Disturbed Areas 3 and 4 Remedial Action

☑ New Submittal ☐ Resubmittal of Submittal No. _____

Submittal Type:

☐ Shop Drawings ☐ Quality Control/Certificates ☐ Surveys
☑ ~~Product~~ Data/Samples Analytical ☐ Manufacturer's Instructions ☐ Project Closeout
☐ Schedule ☐ Construction Equip./Methods ☐ Other

Description of Item Submitted: (Note: Please submit 1 item per Submittal No.)	No. of Copies	Specification Section No.	Exceptions to Specification Requirements
- Results of Test Pit Sampling (6/14/04) For Discussion	2	–	–
- Sketch of Approximate Test Pit Loc.	2	–	–

Contractor hereby certifies that the items submitted for review are in full compliance with the requirements of the Specifications except as otherwise noted in the Exceptions to Specification Requirements above.

Signature: [signature] Date: 6/22/04

Dear Greg,

Attached is our report for your samples received on 06/15/2004 14:55
This report has been reviewed and approved for release. Reproduction of this report is permitted only in its entirety.

Please note that any unused portion of the samples will be discarded after 07/30/2004 unless you have requested otherwise.
We appreciate the opportunity to be of service to you. If you have any questions, please call me at (925) 484-1919.
You can also contact me via email. My email address is: dsharma@stl-inc.com

Sincerely,

Dimple Sharma
Project Manager

Sample Receipt Checklist

Submission #:2004- 06 - 0477

Checklist completed by: (initials) MV Date: 06/15/04

Courier name: ☐ STL San Francisco ☐ Client FBC

Custody seals intact on shipping container/samples	Yes____	No____	Not Present ✓
Chain of custody present?		Yes ✓	No____
Chain of custody signed when relinquished and received?		Yes ✓	No ✓
Chain of custody agrees with sample labels?		Yes ✓	No____
Samples in proper container/bottle?		Yes ✓	No____
Sample containers intact?		Yes ✓	No____
Sufficient sample volume for indicated test?		Yes ✓	No____
All samples received within holding time?		Yes ✓	No____
Container/Temp Blank temperature in compliance (4° C ± 2)?	Temp: 6 °C	Yes ✓	No____
	Ice Present	Yes ✓	No____
Water - VOA vials have zero headspace?	No VOA vials submitted ✓	Yes____	No____

(if bubble is present, refer to approximate bubble size and itemize in comments as S (small ~O), M (medium ~ O) or L (large ~ O)

Water - pH acceptable upon receipt? ☐ Yes ☐ No Soil

☐ pH adjusted– Preservative used: ☐ HNO_3 ☐ HCl ☐ H_2SO_4 ☐ NaOH ☐ ZnOAc –Lot #(s) _____

For any item check-listed "No", provided detail of discrepancy in comment section below:

Comments: SAMPLE # 5 NO SAMPLE ID# 061404-BBSTP-117D. ~~ONE~~ MV
EXTRA SAMPLE ID# 061404-BBSTP-116D, LOGGED AS SAMPLE # 5

Project Management [Routing for instruction of indicated discrepancy(ies)]

Project Manager: (initials) _____ Date: _____/_____/04

Client contacted: ☐ Yes ☐ No

Legend and Notes

Report Comment

The composite sample was examined to determine the possible nature of the RPD results for the MS/MSD data. The composite sample is composed of approximately 30% rock particles ranging in size from 0.5 to 3mm and 70% fine dark brown sand with some visible organic material. The data suggests that the original sample contained more of the finer-grained sand with organic material as metal concentrations tend to increase in the finer-grained fractions of soil samples.

Analysis Flag

.

Result Flag

mso

MS/MSD spike recoveries were out of QC limits due to matrix interference.
Precision and Accuracy were verified by LCS/LCSD.

Project: Presido - Baker Beach

Dear Greg,

Attached is our report for your samples received on 07/21/2004 19:15
This report has been reviewed and approved for release. Reproduction of this report is permitted only in its entirety.

Please note that any unused portion of the samples will be discarded after 09/04/2004 unless you have requested otherwise.
We appreciate the opportunity to be of service to you. If you have any questions, please call me at (925) 484-1919.
You can also contact me via email. My email address is: dsharma@stl-inc.com

Sincerely,

Dimple Sharma
Project Manager

Request For Information No. 10

Contract No. PT-2004-024 Baker Beach Disturbed Areas 3 and 4 Remedial Action
PO#_____

INFORMATION REQUEST Contractor's Control No.: _____ Date: 7/27/04

Re:

Spec. Section/Drawing No./Detail Reference:

Question: CONCRETE STOCKPILED AT THE SITE ENTRANCE HAS SOIL WHICH REQUIRED TESTING PRIOR TO RECYCLING OR DISPOSAL. SAMPLES COLLECTED FROM THE SOIL ON THE CONCRETE WERE ANALYZED FOR TTLC AND STLC LEAD AND ARE ATTACHED FOR YOUR REVIEW.

THE SOIL ANALYSES INDICATES THAT THE SOIL ON THE CONCRETE DOES NOT MEET CRITERIA FOR NON HAZARDOUS HANDLING OR FOR RECYCLING. HOW DO YOU WISH TO PROCEED WITH THE CONCRETE OFFHAUL?

GENERATOR AND CUSTOMER MUST READ AND SIGN REVERSE HEREOF

INITIAL _____
INITIAL _____

TERMS AND CONDITIONS

1. **ACCEPTABLE WASTE.** Customer shall deliver and Company shall accept for disposal or other management purpose only Acceptable Waste. As used herein, "Customer" shall mean both Customer and Generator listed on the reverse hereof. Customer shall deliver the full quantity of Acceptable Waste generated and/or handled by Customer as estimated on the reverse hereof. Acceptable Waste means and includes only such waste as is described on the reverse and which is approved and permitted for management at the Designated Facility listed on the reverse, and shall not include any Nonconforming Waste. As used herein, Nonconforming Waste means waste that: (a) is not in conformance with the description and/or estimated quantity of the waste set forth on the reverse; (b) is or contains any infectious waste, or radioactive, volatile, corrosive, highly flammable, explosive, biomedical, biohazardous material or hazardous, dangerous, or toxic substances, as defined pursuant to or listed or regulated under applicable federal, state or local law, except as stated on the reverse; or (c) is prohibited from being received, managed or disposed of at the Designated Facility by federal, state or local law, regulation, rule, code, ordinance, order, permit or permit condition;

2. **REPRESENTATIONS & WARRANTIES.** Customer represents and warrants that: (a) the description of the waste set forth on the reverse hereof is true and correct in all material respects; (b) all waste delivered to the Designated Facility by Customer shall be Acceptable Waste as defined above and shall not be or contain Nonconforming Waste; (c) Customer shall, and shall cause any carrier with which it contracts to, handle and transport the waste in a safe and workmanlike manner in full compliance with all applicable federal, state and local laws, ordinances, decisions, orders, rules or regulations; and (d) Customer has advised its drivers of Company's prohibition on delivery of Nonconforming Waste, of the definitions and listing of hazardous waste and hazardous substances under applicable federal and state law and regulations and of the definition of Acceptable Waste herein. Company represents and warrants that it shall manage the Acceptable Waste in a safe and workmanlike manner in full compliance with all applicable federal, state and local laws, ordinances, decisions, orders, rules or regulations.

3. **WASTE REJECTION.** Company may inspect, analyze or test any waste delivered by Customer and/or may reject, refuse or revoke acceptance of any waste if, in the opinion of Company, the waste or tender of delivery fails to conform to or Customer fails to comply with the terms of this Agreement, including by delivery of Nonconforming Waste. Company may also reject any waste which (a) Company reasonably believes would, as a result of or upon disposal or other management, be a violation of local, state or federal law, regulation, ordinance or permits, including land use restrictions or conditions applicable to the Designated Facility; or (b) in Company's opinion would present a significant risk to human health or the environment, cause a nuisance or otherwise create or expose Company or Customer to potential liability. Company also shall have the right to refuse to accept or to reject any Acceptable Waste in the event of Customer's failure to pay fees owed by Customer hereunder. In the event Company rejects or revokes acceptance of waste hereunder, Customer shall, at its sole cost, immediately remove or arrange to have the rejected waste removed from Company's control or property. Customer shall pay and/or reimburse Company for any and all costs, damages and/or fines incurred as a result of or relating to Customer's tender or delivery of Nonconforming Waste or other failure to comply or conform to this Agreement, including costs of inspection, testing and analysis.

4. **SPECIAL HANDLING; TITLE.** If Company elects, in its sole discretion, to handle, rather than reject, Nonconforming Waste, Company shall have the right to manage such Nonconforming Waste in the manner deemed most appropriate by Company given the characteristics of the Nonconforming Waste. Company may assess and Customer shall pay additional fees associated with delivery of Nonconforming Waste, including, but not limited to, special handling or disposal charges, and costs associated with different quantities of waste, different delivery dates, modifications in operations, specialized equipment, and other operational, environmental, health, safety or regulatory requirements. Title to and ownership of Acceptable Waste shall transfer to Company upon its final acceptance of Acceptable Waste. Title to, ownership of and liability for Nonconforming Waste shall at all times remain with Customer. Revocation of acceptance by Company shall operate to re-vest all incidents of ownership in Customer.

5. **INDEMNITY.** Each party hereto (the "Indemnitor") hereby agrees to indemnify, hold harmless and defend the other party, and its owners, officers, directors, employees and agents (collectively, the "Indemnitees"), from and against any and all liabilities, penalties, fines, forfeitures, fees, demands, claims, causes of action, suits, judgments and costs and expenses incidental thereto, including attorneys' fees (collectively, "Damages"), which any or all of the Indemnitees may hereafter suffer, incur, be responsible for or pay out, including for personal injuries, property damage, or contamination of or adverse effects on the environment, to the extent caused by, or arising from or in connection with the breach of any representations or warranties of the Indemnitor set forth in this Agreement, or any negligent actions or omissions or willful misconduct of the Indemnitor, its employees, officers, owners, directors or agents, or the violation of any law, ordinance or regulation, including, without limitation, the Comprehensive Environmental Response, Compensation and Liability Act, 42 U.S.C. § 9601 et seq., as amended. Such indemnity shall exclude Damages to the extent they arise as a result of any negligent actions or omissions or willful misconduct of the Indemnitees or their employees, officers, owners, directors or agents. The indemnification obligation hereunder shall arise only in excess of any available and collectible insurance proceeds and the Indemnitor shall be liable hereunder to pay only its share of the amount of Damages, if any, that exceeds the total amount that all insurance has paid for the Damages, plus the total of all deductible and self-insured expenses paid under all insurance policies. The obligations in this Section 5 shall survive the performance and termination of this Agreement.

6. **UNCONTROLLABLE CIRCUMSTANCES; TERMINATION.** Except for the obligation to pay fees hereunder, the performance of this Agreement may be discontinued or temporarily suspended by either party, and neither party shall be deemed to be in breach of this Agreement, in the event performance is prevented by a cause or causes beyond the reasonable control of the affected party. Such causes shall include, but not be limited to, acts of God, acts of war, riot, fire, explosion, accident, flood or sabotage, governmental laws (including nuisance), permit conditions, regulations, restrictions (including land use), condition of the waste, injunction or actions or omissions of third party transporters or other contractors, suppliers or vendors. Company may immediately terminate management services hereunder upon written notice to Customer in the event Customer breaches any term, provision or obligation under this Agreement, in which case, Customer shall be liable for and shall pay to Company all costs and losses incurred by Company as a result of or relating to any such termination.

7. **MISCELLANEOUS.** This Agreement shall be governed by the laws of the state in which the Designated Facility is located. Every provision of this Agreement shall be severable. This Agreement represents the entire understanding and Agreement between the parties relating to the management of waste, except that, if the parties, or their parent companies, are parties to a national service agreement, the terms of such national service agreement shall govern over any inconsistent terms in this Agreement. No representations, statements or Agreements, unless agreed to by the parties in writing, shall modify, change, amend or otherwise affect the obligations undertaken in this Agreement. No waiver by either party of any one or more defaults or breaches by the other in the performance of this Agreement shall operate or be construed as a waiver of any future defaults or breaches. Customer may not assign this Agreement without the prior written consent of Company. This Agreement shall be binding upon and shall inure to the benefit of the parties' successors and assigns.

THIS IS A LEGALLY BINDING CONTRACT. EACH UNDERSIGNED INDIVIDUAL ACKNOWLEDGES THAT HE/SHE HAS READ AND UNDERSTANDS THE TERMS AND CONDITIONS OF THIS AGREEMENT SET FORTH ABOVE AND ON THE REVERSE HEREOF AND THAT HE/SHE HAS THE AUTHORITY TO SIGN ON BEHALF OF CUSTOMER/GENERATOR AND COMPANY. BY SIGNING BELOW, CUSTOMER AND GENERATOR INDICATE A FIRST HAND KNOWLEDGE OF THE WASTE'S CHARACTERISTICS AND CERTIFY THE TRUTH OF THE INFORMATION ON THE REVERSE HEREOF. AGREED TO AS OF THE DATES BELOW.

Checking is only for general conformance with the design concept of the project and general compliance with the information given in the Specifications. Any action shown is subject to the requirements of the plans and specifications. Contractor is responsible for: dimensions which shall be confirmed and correlated at the job site; fabrication processes and techniques of construction; coordination of his work with that of all other trades; and the satisfactory performance of his work. Acceptance of this submittal does not relieve contractor from the responsibility of errors in the submittal.

Dear Mr. Cannizzaro,

Attached is our report for your samples received on 07/26/2004 17:25
This report has been reviewed and approved for release. Reproduction of this report is permitted only in its entirety.

Please note that any unused portion of the samples will be discarded after 09/09/2004 unless you have requested otherwise.
We appreciate the opportunity to be of service to you. If you have any questions, please call me at (925) 484-1919.
You can also contact me via email. My email address is: dsharma@stl-inc.com

Sincerely,

Dimple Sharma
Project Manager

construction drawings and specifications have
prepared in accordance with design criteria and
ments established by the Presidio Trust (Trust)
ational Park Service (NPS). The Trust
PS prefer that erosion control materials be
t to non-mechanical, biodegradable products and
he slopes be permitted to evolve under naturally
ing processes. Adherence to these criteria and
ments has resulted in a final design that will
result in slope instability typical of the natural
ine. The engineer-of-record, Minshew Minshew,
has discussed these issues with Trust and NPS
Trust and NPS staff understand and accept that
instability and erosion characteristic of the Pacific
line will likely occur.

Sample Receipt Checklist

Submission #:2004- C8 - C656

Checklist completed by: (initials) [illegible] Date: 8 / 25/04

Courier name: ☒ STL San Francisco ☐ Client _____

Custody seals intact on shipping container/samples	Yes____	No____	Not Present ✓
Chain of custody present?	Yes ✓	No____	
Chain of custody signed when relinquished and received?	Yes ✓	No____	
Chain of custody agrees with sample labels?	Yes ✓	No____	
Samples in proper container/bottle?	Yes ✓	No____	
Sample containers intact?	Yes ✓	No____	
Sufficient sample volume for indicated test?	Yes ✓	No____	
All samples received within holding time?	Yes ✓	No____	
Container/Temp Blank temperature in compliance (4° C ± 2)? Temp: 6 °C	Yes ✓	No____	

Potential reason for > 6°C – Ice melted ☐ Ice in bags ☐ Not enough ice ☐ Not enough blue ice ☐ Samples in boxes ☐

Sampled < 4hr. ago? ☐ Ice not required (e.g. air or bulk sample) ☐

Ice Present Yes ✓ No____

Water - VOA vials have zero headspace? Soil No VOA vials submitted ✓ Yes____ No____

(if bubble is present, refer to approximate bubble size and itemize in comments as **S** (small ~O), **M** (medium ~ O) or **L** (large ~ O))

Water - **pH acceptable upon receipt?** ☐ Yes ☐ No

☐ **pH adjusted**– Preservative used: ☐ HNO_3 ☐ HCl ☐ H_2SO_4 ☐ NaOH ☐ ZnOAc –**Lot #(s)** _____

For any item check-listed "No", provided detail of discrepancy in comment section below:

Comments:

Project Management [Routing for instruction of indicated discrepancy(ies)]

Project Manager: (initials) _____ Date: _____/_____/04 Client contacted: ☐ Yes ☐ No

Checking is only for general conformance with the design concept of the project and general compliance with the information given in the Specifications. Any action shown is subject to the requirements of the plans and specifications. Contractor is responsible for: dimensions which shall be confirmed and correlated at the job site; fabrication processes and techniques of construction; coordination of his work with that of all other trades; and the satisfactory performance of his work. Acceptance of this submittal does not relieve contractor from the responsibility of errors in the submittal.

COOLER RECEIPT CHECKLIST

Login#: 174631 Date Received: 9/14/04 Number of Coolers: 1
Client: Treadwell + Rollo Project: Presidio - Baker Beach 3

A. Preliminary Examination Phase
Date Opened: 9/14/04 By (print): Peter P. (sign) [signature]

1. Did cooler come with a shipping slip (airbill, etc.)?..... YES NO
   If YES. enter carrier name and airbill number:
2. Were custody seals on outside of cooler?..... YES NO
   How many and where? Seal date: Seal name:
3. Were custody seals unbroken and intact at the date and time of arrival?..... YES NO N/A
4. Were custody papers dry and intact when received?..... YES NO
5. Were custody papers filled out properly (ink, signed, etc.)?..... YES NO
6. Did you sign the custody papers in the appropriate place?..... YES NO
7. Was project identifiable from custody papers?..... YES NO
   If YES, enter project name at the top of this form.
8. If required, was sufficient ice used? Samples should be 2-6 degrees C. ..... YES NO
   Type of ice: WET Temperature: COLD

B. Login Phase
Date Logged In: 9/14/04 By (print): Peter P. (sign) [signature]

1. Describe type of packing in cooler: Zip Lock bag
2. Did all bottles arrive unbroken?..... YES NO
3. Were labels in good condition and complete (ID, date, time, signature, etc.)?.. YES NO
4. Did bottle labels agree with custody papers?..... YES NO
5. Were appropriate containers used for the tests indicated?..... YES NO
6. Were correct preservatives added to samples?..... YES NO N/A
7. Was sufficient amount of sample sent for tests indicated?..... YES NO
8. Were bubbles absent in VOA samples? If NO, list sample Ids below..... YES NO N/A
9. Was the client contacted concerning this sample delivery?..... YES NO
   If YES, give details below.
   Who was called? By whom? Date:

Dear Mr. Cannizzaro,

Attached is our report for your samples received on 09/24/2004 15:40
This report has been reviewed and approved for release. Reproduction of this report is permitted only in its entirety.

Please note that any unused portion of the samples will be discarded after 11/08/2004 unless you have requested otherwise.
We appreciate the opportunity to be of service to you. If you have any questions, please call me at (925) 484-1919.
You can also contact me via email. My email address is: dsharma@stl-inc.com

Sincerely,

Dimple Sharma
Project Manager

Dear Mr. Cannizzaro,

Attached is our report for your samples received on 10/05/2004 15:30
This report has been reviewed and approved for release. Reproduction of this report is permitted only in its entirety.

Please note that any unused portion of the samples will be discarded after 11/19/2004 unless you have requested otherwise.
We appreciate the opportunity to be of service to you. If you have any questions, please call me at (925) 484-1919.
You can also contact me via email. My email address is: dsharma@stl-inc.com

Sincerely,

Dimple Sharma
Project Manager

APPENDIX G
95% UCL Calculations for Nickel, Selenium, and Vanadium

APPENDIX G

PROCEDURES TO CALCULATE THE 95% UCL
Baker Beach Disturbed Area 3
Presidio of San Francisco, California

At Baker Beach Disturbed Area 3 (BBDA 3), one remaining confirmation soil sample location had an exceedance of the applicable site cleanup level for nickel, three remaining confirmation soil sample locations had exceedances of the applicable site cleanup level for selenium, and two remaining confirmation soil sample locations had exceedances of the applicable site cleanup level for vanadium. Specifically, an exceedance of the applicable soil cleanup level for nickel was identified in sample BB3EX128[0.5]; exceedances of the applicable soil cleanup levels for selenium were identified in samples BB3EX128[0.5], BB3EX151[0.5], and BB3EX152[0.5]; and exceedances of vanadium were identified in samples BB3EX141[2.5] and BB3EX141[5.5] (Table 6). For these soils that were to remain onsite, the 95% Upper Confidence Limit (UCL) of the mean value of the data set was calculated and then compared to the applicable site cleanup levels to determine whether the remaining exceedance(s) presented an unacceptable health or environmental risk. The calculations were performed in conformance with EPA guidance (EPA, 2002). The calculations are shown in Table G-1 and are described below.

The first step in performing the UCL calculation is to analyze the data set to evaluate whether the data distribution approximates either a normal or lognormal data distribution. A visual inspection of histograms of the data for these constituents (Figures G-1A, G-1B, and G-1C) indicated that the data for all three metals are approximately lognormally distributed. Therefore, a lognormal distribution was assumed for the data sets, and the 95% UCL was calculated by the Land Method (Table G-1), which uses the following equation (EPA, 2002):

$$UCL = \exp\left(\bar{x} + \frac{s^2}{2} + \frac{Hs}{\sqrt{n-1}}\right)$$

where

UCL = Upper Confidence Limit on the mean concentration
$\bar{x}$ = arithmetic mean of the log-transformed concentration values
H = H-statistic
s = standard deviation of the log-transformed concentration values
n = number of samples in the data set

Values of the H-statistic can be obtained from tables in the published literature (Land, 1975). In the case of selenium, samples without detectable concentrations were assumed to contain the analyte at concentrations equal to one-half the detection limit given for the sample. However, given that the calculation used log-transformed concentration values,

the detection limits also required transformation. For example, a detection limit of 0.21 mg/kg was log-transformed according to the following equation.

$$< 0.21 \cong \ln\left(\frac{0.21}{\sqrt{2}}\right) = -1.907$$

In cases where field duplicates were collected, the concentration values of the two samples were averaged before performing the calculations.

The results of these calculations for BBDA 3 are discussed in greater detail in Section 3.2.4.3. of the main report.

Table G-1
Calculation of 95% Upper Confidence Limits for Nickel, Selenium, and Vanadium Confirmation Soil Sampling Data
Baker Beach Disturbed Area 3
Presidio of San Francisco, California

Sample ID	Sample Date	Lithology	Nickel	Selenium	Vanadium	Nickel - Averaged Duplicates	Selenium - Averaged Duplicates	Vanadium - Averaged Duplicates	Nickel - Ln(x)	Selenium - Ln(x) or Ln[(x)/sqrt(2)]	Vanadium - Ln(x)
			mg/kg	mg/kg	mg/kg

Notes
mg/kg - milligrams per kilogram
Values in bold typeface indicate cleanup level exceedances.
Shading indicates area was overexcavated; these data are not included in the 95% UCL calculations.
[1] Cleanup levels for chert are from the Presidio Cleanup Levels Document (EKI, 2002). Cleanup levels for all other lithologies are from the RAP (Treadwell & Rollo, 2004a).
[2] Pre-1958 Road Fill consists of a mixture of Colma, beach/dune sand, and serpentinite. Analytical results are compared against cleanup levels for serpentinite.

UNIFIED SOIL CLASSIFICATION SYSTEM

Major Divisions		Symbols	Typical Names
Coarse-Grained Soils (more than half of soil > no. 200 sieve size	**Gravels** (More than half of coarse fraction > no. 4 sieve size)	**GW**	Well-graded gravels or gravel-sand mixtures, little or no fines
		GP	Poorly-graded gravels or gravel-sand mixtures, little or no fines
		GM	Silty gravels, gravel-sand-silt mixtures
		GC	Clayey gravels, gravel-sand-clay mixtures
	Sands (More than half of coarse fraction < no. 4 sieve size)	**SW**	Well-graded sands or gravelly sands, little or no fines
		SP	Poorly-graded sands or gravelly sands, little or no fines
		SM	Silty sands, sand-silt mixtures
		SC	Clayey sands, sand-clay mixtures
Fine -Grained Soils (more than half of soil < no. 200 sieve size)	**Silts and Clays** LL = < 50	**ML**	Inorganic silts and clayey silts of low plasticity, sandy silts, gravelly silts
		CL	Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, lean clays
		OL	Organic silts and organic silt-clays of low plasticity
	Silts and Clays LL = > 50	**MH**	Inorganic silts of high plasticity
		CH	Inorganic clays of high plasticity, fat clays
		OH	Organic silts and clays of high plasticity
Highly Organic Soils		**PT**	Peat and other highly organic soils

GRAIN SIZE CHART

Classification	Range of Grain Sizes	
	U.S. Standard Sieve Size	Grain Size in Millimeters
Boulders	Above 12"	Above 305
Cobbles	12" to 3"	305 to 76.2
Gravel	3" to No. 4	76.2 to 4.76
coarse	3" to 3/4"	76.2 to 19.1
fine	3/4" to No. 4	19.1 to 4.76
Sand	No. 4 to No. 200	4.76 to 0.074
coarse	No. 4 to No. 10	4.76 to 2.00
medium	No. 10 to No. 40	2.00 to 0.420
fine	No. 40 to No. 200	0.420 to 0.074
Silt and Clay	Below No. 200	Below 0.074

Unstabilized groundwater level

Stabilized groundwater level

SAMPLE DESIGNATIONS/SYMBOLS

Sample taken with Sprague & Henwood split-barrel sampler with a 3.0-inch outside diameter and a 2.43-inch inside diameter. Darkened area indicates soil recovered

Classification sample taken with Standard Penetration Test sampler

Undisturbed sample taken with thin-walled tube

Disturbed sample

Sampling attempted with no recovery

Core sample

Analytical laboratory sample

Sample taken with Direct Push sampler

SAMPLER TYPE

C Core barrel

CA California split-barrel sampler with 2.5-inch outside diameter and a 1.93-inch inside diameter

D&M Dames & Moore piston sampler using 2.5-inch outside diameter, thin-walled tube

O Osterberg piston sampler using 3.0-inch outside diameter, thin-walled Shelby tube

PT Pitcher tube sampler using 3.0-inch outside diameter, thin-walled Shelby tube

S&H Sprague & Henwood split-barrel sampler with a 3.0-inch outside diameter and a 2.43-inch inside diameter

SPT Standard Penetration Test (SPT) split-barrel sampler with a 2.0-inch outside diameter and a 1.5-inch inside diameter

ST Shelby Tube (3.0-inch outside diameter, thin-walled tube) advanced with hydraulic pressure

BAKER BEACH DISTURBED AREA 3
Presidio of San Francisco, California

CLASSIFICATION CHART

Treadwell&Rollo

Date 07/22/05 | Project No. 2893.12 | Figure I-1

PROJECT: **BAKER BEACH DISTURBED AREA 3**
Presidio of San Francisco, California

Log of Monitoring Well BB3GW100

Boring location: See Site Plan, Figure 5**	Logged by: M. Chamberlain
Date started: 12/6/04 — Date finished: 12/6/04	Drilled By: Gregg Drilling
Drilling method: Hollow Stem Auger	Coordinates: Northing: 478398.657, Easting: 1428456.285
Hammer weight/drop: N/A — Hammer type: Automatic - Ryno	
Sampler: Split Spoon	

Top of Casing Elevation: 193.84[1]

DEPTH (feet)	LITHOLOGY	MATERIAL DESCRIPTION
1–2	GW	GRAVEL (GW) dark red brown, very dense, dry, angular to sub-angular, well graded, no odor, 15 percent sand, 5 percent fines,
3–17	SP	SAND (SP) light brown, loose, moist, sub-rounded to sub-angular, non-plastic, poorly graded, no odor, 5 percent fines, trace fine gravel, (dune sand)
18–21	SP	SAND (SP) dark brown, loose, moist, sub-angular, slightly plastic, poorly graded, no odor, 15 percent fines, trace fine gravel
21–25	SM	SILTY SAND (SM) light yellow brown, dense, moist, sub-angular, slightly plastic, moderately graded, no odor, 25 percent fines, mottled, some roots

Notes

EM - Elevation Monitoring only

Surface - Surface Water Sampling per Standard Operating Procedure

Q - Sample during all quarters unless otherwise directed

TPHg, TPHd, TPHfo, TPHss: Total Petroleum Hydrocarbons as gasoline, diesel, fuel oil, and stoddard solvent - EPA 3630A: Silica Gel Cleanup Step

General Chemistry Parameters; Alkalinity (total), bicarbonate, carbonate, chloride, fluoride, nitrate+nitrite (as N), sulfate

1 - Modified and Surface water sampling techniques. A description of sampling techniques can be found in the *Field Sampling Plan, Presidio Groundwater Monitoring Project* (Treadwell & Rollo, 2001a).

2 - Hand - Well accessible by hand truck only

3 - Sampling Order: At each site sample the wells with the lowest number first. For example, sample the number 1 wells first, the number 2 wells second etc. At this site, all are noted as "1 - Wells without significant detections of chemicals of concern."

4 - 22 Metals List - Al, Sb, As, Ba, Be, Cr, Cd, Ca, Co, Cu, Fe, Pb, Mg, Mn, Ni, K, Ag, Na, Se, Th, V, and Zn.

5 - Dissolved Oxygen (DO) concentration included in field sampling logs. DO values recorded immediately before sample collection.

BB3PZ101.

FLUIDS ADDED

Lost Drilling Fluid: _____ Gallons
Lost Purge Water: _____ Gallons
Water During Installation: _____ Gallons
Total Fluids Added: _____ Gallons
Source of Added Water: _____
Sample Collected of Added Water: Y N
Sample Designation of Added Water: _____

PURGE VOLUME CALCULATION

Casing Volume: 6.13 Ft. of water
x .9 Gallons/Foot
= 5.5 Gallons per Single Casing Volume
Sand Pack Volume: _____ Ft. of Saturated Sand Pack
x _____ Gallons/Foot (borehole diameter)
= _____ Gallons (in borehole)
- _____ Gallons of Casing Volume
= _____ x 0.3 (Assuming porosity = 30%)
= _____ Gallons Within Sand Pack
Single Purge Volume: _____ Gallons (Casing Vol. + Sand Pack Vol. + Fluids Added)
Minimum Purge Volume: 55 Gallons
Actual Purge Volume: _____ Gallons
Volume Measured by: _____
Rate of Development ~1 Gallons/Minute (Hour, Day)
Pumping Rate/Depth _____ @ _____ Ft. (Below Grd.)
Immiscible Phases Present: Y N Thickness _____

Development Criteria: surged well for 15min prior to purging

APPENDIX K

Slope Stability Evaluation of Final Slope Configurations, Baker Beach Disturbed Area 3

(Treadwell & Rollo, Inc., June 2005)

Treadwell&Rollo

24 June 2005
Project: 2893.12.0011

The Presidio Trust
ATTN: Ms. Jennifer Yata
Building 1750
Post Office Box 29052
San Francisco, CA 94129-0052

Subject: Revised Slope Stability Evaluation of Final Slope Configurations
Baker Beach Disturbed Area 3
Presidio of San Francisco, California

Dear Ms. Yata:

This letter presents the results of our stability evaluation of the final slope configuration following the fill removal activities at Baker Beach Disturbed Area 3 (BBDA 3). We previously performed a slope stability evaluation of the BBDA 3 site that included an evaluation of the pre-construction slope stability as well as the stability of the anticipated post-construction slope configurations. The results of this evaluation were presented in a written report dated 28 May 2004 (Treadwell & Rollo 2004b). As discussed below, the final post-construction slope configurations differed from those previously evaluated. Consequently, the 'post-construction' stability evaluation documented in that report is no longer applicable. The results presented herein should be considered an addendum to our 28 May 2004 report.

Background

BBDA 3 site is located within the Coastal Bluffs area near the western boundary of the Presidio of San Francisco. BBDA 3 was a fill site that was created by the Army while the Presidio was a defense facility by filling a pre-existing ravine. The fill on the western portion of BBDA 3 was impacted by contaminants of concern (COCs) at concentrations exceeding applicable cleanup levels. Subsequently, the Remedial Action Plan (Treadwell & Rollo, 2004a) called for the removal of contaminated debris and soil fill on the western portion of the site. The eastern portion of BBDA 3 did not contain contaminated soil and was, therefore, generally left in place.

The two main objectives of the landfill removal were to remove all contaminated soil and to restore the excavated portion of Baker Beach Disturbed Area 3 (BBDA 3) to the natural dune-bluff topography that existed prior to the placement of waste fill. These objectives are consistent with National Park Service management policies, which require that natural areas be modified as little as possible. Consequently, the post-construction slopes were not reinforced or otherwise modified to improve bluff-wide stability or reduce the effects of earthquake-induced slope stability. Site work after fill removal was limited to controlling excessive erosion by use of straw wattles, silt fences, and sand bags. Therefore, recommendations to improve bluff-wide stability were not part of the scope of this or previous studies.

Treadwell & Rollo, Inc. *Environmental & Geotechnical Consultants*
555 Montgomery Street, Suite 1300, San Francisco, CA 94111

Excavation Activities

The fill removal activities were mostly conducted from June through November of 2004. During this period of time we intermittently visited the site to observe the site conditions. In addition, three survey monitoring points were installed on Lincoln Boulevard to observe any horizontal or vertical movements that could be associated with the construction activities. On the basis of the survey results from Chaudhary & Associates, Inc., the monitoring points appeared to be relatively stable throughout construction (see Table 1).

The depth and extent of fill removal was based on the environmental analytical results from soil samples collected in the field. Initial estimates of contaminated fill indicated that approximately 15,000 to 30,000 cubic yards (cy) of fill would need to be removed, ranging in thickness from about 1 to 30 feet. During construction the fill was deeper than expected, and some of the underlying native Dune Sand was also found to be contaminated and, consequently, removed. By the end of construction, about 37,800 cy of fill and contaminated native soil were removed, ranging in thickness from about one to 36 feet. The final excavation resulted in steep slopes that are closer to the post-construction alignment of Battery Crosby Road than previously anticipated.

To date, all of the required debris fill and contaminated native material have been removed from the site. We understand the remaining site activities include the re-construction of Battery Crosby Road; repairing of erosion control elements; and limited slope grading. The re-construction of Battery Crosby Road may include placing a significant volume of imported fill material on or adjacent to the current Battery Crosby Road alignment (the post-construction alignment). In the event significant fill is placed, we should evaluate the impact of this filling on the stability of the site slopes.

Final Site Configurations

The western portion of BBDA 3 now forms a moderately steep, flat-bottomed, V-shaped ravine, trending towards the west, as shown on the Topographic Map (Figure 1). In general the BBDA 3 site slopes are blanketed by native Dune Sand with the exception of the ravine floor in the western portion of the site, where localized areas of Colma Formation clay are exposed.

The post-remediation alignment of Battery Crosby Road is approximately 12 feet wide and runs parallel with the toe of the eastern fill slope. It should be noted that the eastern slope was not disturbed during the fill removal activities. As shown on Figure 1, Zone 1 of the current Battery Crosby Road alignment runs at the head of the newly graded slope. This slope is slightly terraced and is relatively steep, with inclinations of about 1.4:1 (horizontal:vertical) to about 1.7:1 for a horizontal distance of about 30 feet from Battery Crosby Road.

During our initial investigation, several seasonal groundwater seeps were observed at the contact between the Colma Formation and the overlying Dune Sand (Treadwell & Rollo, Inc. 2004b,)

indicative of a shallow groundwater perched above the Colma Formation. The site grading removed much of the overlying Dune Sand in the middle of the ravine and, subsequently, these seeps are now exiting the graded (post-construction) slope near the middle of the site (at a distance of about 470 feet from Lincoln Boulevard). The flow rate from these seeps varies considerably and appears to be dependent on the amount of rainfall. The recent heavy rains have been causing erosion of Dune Sand near the seep locations.

Stability Evaluation and Conclusions

We performed periodic evaluations of the temporary slopes throughout construction to verify that the site slopes were globally stable under short-term conditions. As anticipated, raveling and gullying of the steeper Dune Sand slopes occurred throughout construction. Upon completion of mass grading, we performed additional analyses to evaluate the long-term stability of the final site slopes. The results of these analyses are included herein.

In our analyses we used the final post-construction ground surface (topographic map by RW Davis & Associates) and groundwater levels consistent with conditions observed in the field. We used slope stability methodologies and material properties used in our original evaluation, (see Section 8.0 of our May 2004 report) and we used the computer program Slope /w (version 4.23) by Geoslope International (1999) for our analyses. Factors of safety were computed using various limit equilibrium methods, including Modified Bishop, Janbu, and Spencer's Methods. The computer program internally searched for the most critical failure surface, i.e. with the lowest factor of safety. Typically, a slope with a static factor of safety greater than 1.5 and a seismic factor of safety of 1.1 with a seismic coefficient of 0.1 to 0.15 is considered stable (CDMG, 1997).

The results of the analyses indicate that the current ("final") slope configurations will continue to be prone to shallow raveling-type erosional failures (factors of safety ≤ 1.0). These types of failures will likely continue on the steep side slopes (north and south) of the ravine. Furthermore, the steep slopes at the western boundary of BBDA 3 will continue to be marginally stable (Factor of Safety about 1.3). These are consistent with our findings presented in our 2004 slope stability report.

We also evaluated the stability of the final slopes for global deep-seated failures. We computed factors of safety between 1.7 and 2.2 and, hence, conclude that the final slopes are stable under static conditions against global deep-seated failures.

The one area showing a significant difference from our original study is the steepened slopes immediately downslope of the newly constructed Battery Crosby Road. The post-grading slope is steep and is prone to shallow raveling-type failures over the long term (factor of safety ≤ 1.0), particularly if exposed to surface water.

The potential for liquefaction, lateral spreading, and differential settlement were previously discussed in Section 7.3 of our May 2004 report. The final slope configurations do not eliminate issues associated with liquefaction-induced slope instability. Accordingly, liquefaction and lateral spreading are likely to occur during a major earthquake, resulting in large downslope displacements that could negatively impact the site as well as portions of Lincoln Boulevard and Ocean Beach.

Discussion

Consistent with the results of our analyses and recent observations, the steep Dune Sand slopes across the site are susceptible to raveling, erosion, and gullying in wet and rainy weather conditions. Dune Sand slopes steeper than about 2:1 are not generally stable in the long term. For the most part, sloughing and erosion of surface sands will not affect improvements around the site. However, if the steep Dune Sand slopes adjacent to Battery Crosby Road erode or ravel, portions of the newly graded Battery Crosby roadway will likely be impacted. The shallow type slope erosion and instabilities can be addressed in terms of a long-term maintenance of the slope and/or Battery Crosby Road. Permanent solutions to the on-going erosional and instability issues could include placing an engineered buttress fill that would flatten the slopes, prevent surface water from sheeting over the slope, and create a setback between the roadway and the top of the slope.

However, we understand the exposed 'natural' conditions are favored by both the Presidio Trust and the National Park Service. We further understand the Trust is not planning on performing additional work to address the above discussed raveling and/or stability issues of the site, except for short term erosion control. In the event the Trust chooses to perform remedial work to address these issues, we would be pleased to provide detailed recommendations as requested.

The conclusions presented herein are based on our observations of surface conditions at the end of mass grading, the subsurface information gathered during our field investigation, and our experience with similar sites within The Presidio of San Francisco. Please feel free to contact us with any questions.

Sincerely yours,
TREADWELL & ROLLO, INC.

Sign Convention: Movement North +
Movement East +
Increase in Elevation +

Note: Movement of 0.01 feet or less is considered insignificant in terms of being able to measure.

LEGEND

- ● BB3SB201 Soil Boring
- Limits of Excavation
- Estimated Limits of Fill (RAP)
- Topographic Contour Post-Excavation (Contour Interval : 5 ft) (Contour Interval : 1 ft)
- Section of removed Historical Battery Crosby Road
- Zone 1 of the current Battery Crosby Roadway
- Limits of Excavated Fill
- Approximate limits of remaining native vegetation; delineated in field by NPS representative.
- Approximate limits of stripped vegetation
- 1630 Building and Number

Notes:
Post-excavation topography surveyed by R.W. Davis & Associates on December 2, 2004.

Base map was provided by the Presidio Trust in June 2003.

Horizontal Datum: NAD 27, CA State Plane Coordinates, Zone 3, feet.
Vertical Datum: (topography) National Geodetic Vertical Datum, NGVD 29.
